

# Travel to El Paso

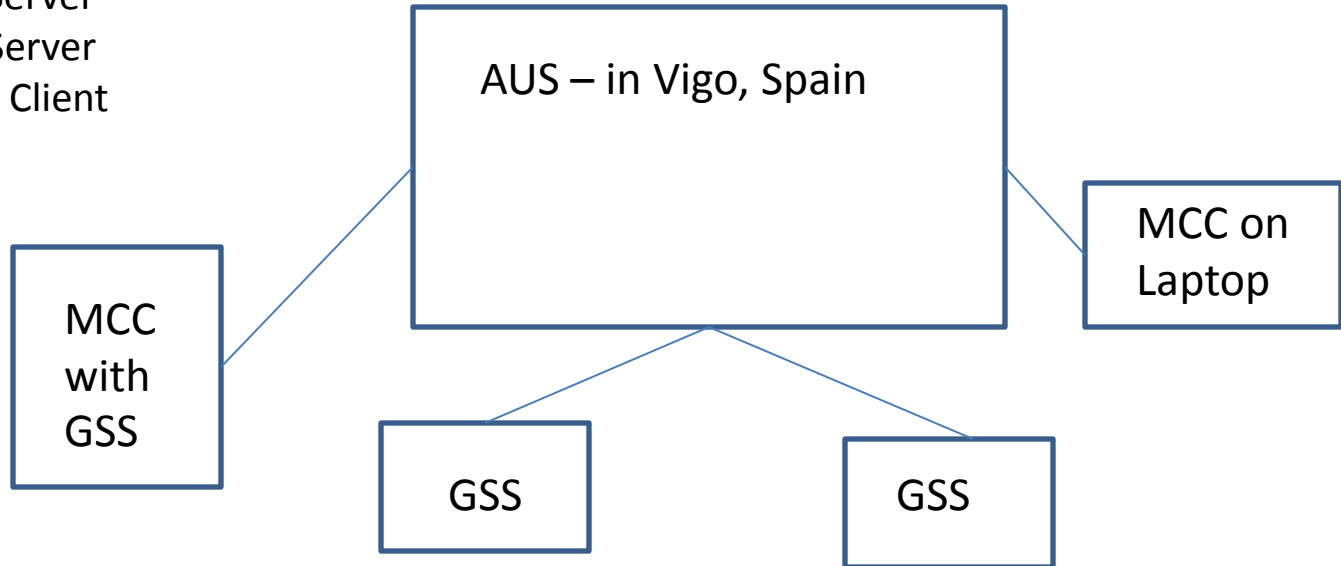

# Where Are Rebels (without millions of dollars) Headed?

- 144 MHz, 400 MHz, 1,200Bps -> GHz, 9,600Bps
- Inexpensive Rotor Controllers
- Inexpensive Radios
- Software Modems

# GENSO Network Details

- \*AUS = Authentication Server
- \*GSS = Ground Station Server
- \*MCC = Mission Control Client

One MCC will be assigned for each GENSO registered spacecraft when fully functional

All GSS receive and distribute a piece of the puzzle but only one MCC sees the entire picture. Since the GSS is tied to a physical ground station, it only sees what is available during a pass whereas the MCC has access to the aggregate of all downloaded data.
