

Making it Small

April 22-24, 2009

**2009 Cal Poly Developers' Workshop
California State Polytechnic University
San Luis Obispo, CA**

*Prof. Bob Twiggs
Bob.Twiggs@Stanford.Edu*

What started the
miniaturization trend?

January 2000

The logo for OPAL, featuring a red hexagon with a white circle and a black dot inside, followed by the letters "OPAL" in a bold, red, sans-serif font.

OPAL

ORBITING PICOSATELLITE AUTOMATED LAUNCHER

Shipping to Utah

Problem?

Too Big

Too Long to Build

Too Costly to Launch

Proposed CubeSat – The Next Generation

Make a Standard

CubeSat

4" x 4" x 4" cube → 10cm cube
1 kg

CubeSat

**Poly Picosatellite Orbital Deployer
(P-POD)**

**Example of Standard CubeSat
(Cal Poly: CP1)**

Who is now using smallsats?

International Universities

Science Foundation- Space Weather

DARPA- ??

NRO- ??

US Army- ??

NASA ARC- Biological Research

NASA Goddard- ???

Boeing- Proof of Concept

The Aerospace Corp.- MEPSI Technology

ESA- ??

Lockheed Martin – University of Florida

The Future?

Further Miniaturization?

What was so unique about the Volkswagen produced in Germany after WW II?

It was “the people’s car”.

Practical and affordable.

What was the Apple computer?

It was “the people’s
computer”.

Practical and affordable.

What is Twitter?

140 character messages

If you could get 140
characters from space
twice/day, what would
you do with it?

Could you conduct any meaningful space activity for 140 characters from space twice/day?

Twitter is “the people’s messenger”.

Practical and affordable.

Now, how about “a
peoples satellite”?

Practical and affordable.

Comments - present satellites

- Present CubeSat too Big?
- Cost too much to launch!
- Everyone needs new challenges.

How about a “VolksSat”?

How about a “VolksCube”?

How about a “TwitterSat”?

Group name	Wet Mass	
■ Large satellite	>1000kg	
■ Medium sized satellite	500-1000kg	
■ Mini satellite	100-500kg	
■ Micro satellite	10-100kg	
■ Nano satellite	1-10kg	Small Satellites
■ Pico satellite	0.1-1kg	
■ Femto satellite	<100g	

How about a satellite that fits in your
Pocket?

Miniaturize to fit in your pocket? Here is an example.

Shrink

Shrink

Shrink

The electronics industry has evolved as packages have gotten smaller and smaller. For example, the 14-pin dual-inline package (DIP) is now today's micro-SMD.

How about a 5cm cube?

Femto Sat?

What should we call it?

What should we call it?

How about PocketQub?

Put 8 together -

Use P-POD concept to launch 8

PocketQub

CubeSat picosatellite

P-POD compatible

Material:
Aluminum 6061-T6

Notes:
All dimensions in inches

Title			
PocketQub External Dimensions			
Drawn by	Date	Drawing No.	Rev.
Bob Twiggs	03/20/09	0000018	A

Using English Dimensions?

Used metrics for CubeSat.

Why not metrics for PocketQub?

It is time those metric guys learned English units.

What if you wanted to build and launch your own private satellite?

What is stopping you?

Don't know how to build it?

Not likely – get a kit.

Too costly? – get easy payment plan.

What is the biggest single cost?

Launch

Launch

Launch

What is a private affordable launch cost?

What would be your budget?

Pay \$250k for a launch?

\$200k?

\$100k?

\$40k?

\$5k?

Your salary - \$100k

What does PocketQub do?

Reduce launch cost.

\$40k/CubeSat - \$5k/PocketQub

\$80k/CubeSat - \$10k/PocketQub

Launch cost reduction?

\$40k/CubeSat - \$5k/PocketQub

\$80k/CubeSat - \$10k/PocketQub

Not the cost of an SUV anymore

Less than the cost of my last motorcycle.

New launch goals:

Kentucky launch of first
PocketQub within one year –
March 2010

Any other challenges?

Have your own vanity satellite!

Students won't get all of the fun.

It may say -

“Hello Jordi”

“Hello Jordi”

“Hello Jordi”

As it goes overhead.

Having fun before
you go to orbit.

Thank You
