

# **Nanosatellite Technologies and Services**

## **At the Space Flight Laboratory**

**Freddy M. Pranajaya**

Manager, Advanced Systems Group

Space Flight Laboratory

University of Toronto Institute for Aerospace Studies  
4925 Dufferin Street, Toronto, Ontario, Canada, M3H 5T6

24 April 2009

2009 CubeSat Developers' Workshop

# Presentation Outline

- UTIAS Space Flight Laboratory
- Operational Missions
  - **MOST** Stellar Photometry (2003)
  - **CanX-2** Technology Demonstrator (2008)
  - **NTS** Responsive AIS Demonstrator (2008)
- Current Missions
  - **AISSat-1** AIS Monitoring Mission (2009)
  - **CanX-3A/B/C/D** Bright Star Photometry Constellation (2010)
  - **CanX-4 & CanX-5** Formation Flying Demonstrator (2010)
  - **M3Msat** Maritime Monitoring and Messaging Microsatellite (2011)
- Miniature Technologies
- Future Launches in 2009 and 2010

# Space Flight Laboratory

- End-to-end capability: mission analysis  $\Rightarrow$  hardware design and manufacturing  $\Rightarrow$  assembly and verification  $\Rightarrow$  launch and on-orbit operations
- Develops high-performance missions using nanosatellite (up to 20 kg) and microsatellite (up to 100 kg)
- Microspace approach = highly focused approach in spacecraft design, resulting in similar capability as traditional missions but more economical and responsive
- Self-managed launch procurement to ensure cost-effective, responsive access to space
- 15 full-time professionals with microspace systems expertise
  - 10-15 graduate students as part of University of Toronto M.Sc. program

# MOST

- Microvariability and Oscillation of Stars Space Astronomy mission
- Canadian Space Agency, ORDCF, OCE
- Payload: 15 cm optical telescope
- Launched on 30 June 2003 (Rockot MOM)
- Microsatellite-class:  
53 kg, 60x30x30 cm
- Status:
  - More data than ever expected
  - In its 6<sup>th</sup> year of operations (originally designed for 1 year)
  - Automated operations from three GS: Toronto (center), Vancouver, Vienna
  - SFL responsibility includes OBC, Comm, Structure, Thermal, shared AI&T, Launch support, Operations

# CanX-2

- Canadian Advanced Nanospace Experiment 2 Technology Demonstrator, Atmospheric Science
- DRDC-Ottawa, CSA, OCE, MDA, NSERC
- Payload: GPS Receiver, Spectrometer, Materials Experiment
- Launched on 28 April 2008 (NLS-4 on PSLV-C9)
- Nanosatellite-class: 3.5 kg, 10x10x34 cm
- Features:
  - High-speed S-band downlink (up to 1 Mbps)
  - Three-axis stabilization with fine-pitch control (sun sensors, magnetometer, magnetorquer, reaction wheel)
  - GPS receiver
  - Liquid-fueled propulsion system

# CanX-2 Status

- Multi-threaded operating system
- High-speed S-band transmitter
  - Variable 32-kbps to 1 Mbps downlink
- Nano reaction wheel
  - Demonstrated critical technology for fine attitude control on nanosatellite
- Three axis / Nadir-pointing ACS
  - Integrated EKF, Sensors, Actuators
  - ~1 deg control accuracy
- Liquid-fueled propulsion system
  - 45 sec Isp, 0.13 mNs min Impulse bit
  - Demonstrated capability for CanX-4 and CanX-5
- GPS receiver
  - Established lock with GPS satellitess
  - Correlated reading with TLE
  - Demonstrated GPS technology for future missions

# CanX-2 Status

- On-going atmospheric experiment
  - Atmospheric Spectrometry (York University)  
Green-house gas detection, 1 km GSD  
Nadir pointing experiment
  - GPS Occultation (University of Calgary)  
Water vapour (Troposphere) and Electron density (Ionosphere)  
Velocity or Anti-Velocity pointing experiment
  - Surface Material Experiment (University of Toronto)  
Anti Atomic Oxygen Coating
- On-going technology demonstration
  - Extended on-orbit operations
  - New algorithm uploads and operations mode
- **360 Days in orbit**
- **350 MB (367001600 bytes) downloaded**

# NTS

- Nanosatellite Tracking of Ships Responsive Automatic Identification System (AIS) Demonstrator
- COM DEV Limited, Cambridge, ON
- Payload: AIS Receiver (COM DEV Ltd)
- Launched on 28 April 2008 (NLS-5 on PSLV-C9)
- Nanosatellite-class: 6.5 kg, 20x20x20 cm bus
- Features:
  - COM DEV advanced AIS receiver (prototype for future mission)
  - Generic Nanosatellite Bus (GNB) form factor
  - XPOD GNB separation system
  - Fixed appendages: 80x45x37 cm including payload and communication antennas
  - High-speed S-band downlink
  - Passive magnetic stabilization

# NTS Status

- Demonstrated Cost-Effective, Responsive Space Mission
  - 7 months from inception to launch
  - First observation in day 10 (shared GS)
- Spacecraft platform
  - Robust platform for rapid design and on-orbit deployment
- AIS Payload
  - Successful detection of Class A ships (primary target) and other secondary targets
  - Successful decoding in crowded shipping lines, harbour, remote fishing areas, other noisy VHF environment
- Results to be used in M3MSat operational microsatellite

Image courtesy of COM DEV Ltd.

# NTS Status

- Continues to AIS collect data
  - 16 MB per day best case into one station (2.1 m dish)
  - Targeting 30 MB per day into one station with protocol improvement
- Automated operations
  - Time-tagged script uplink, automated data downlink
  - Coordinated observation with RADARSAT-2
- 2<sup>nd</sup> ground station in Denmark
  - (almost) online
  - Expects to further improve data throughput
- **360 Days in orbit**
- **903 MB (946864128 bytes) downloaded**

# AISSat-1

- Automatic Identification System Satellite 1  
Demonstration of AIS Detection from Space over Norwegian territory
- Norwegian Defense Research Establishment, Norway
- Payload: AIS Receiver (FFI/Kongsberg, Norway)
- Launch: Q3 2009 (NLS-6 on PSLV)
- Nanosatellite-class: 7 kg, 20x20x20 cm bus
- Features
  - Full GNB implementation
  - 46 cm fixed AIS 162 MHz antenna
  - Three axis stabilized platform with reaction wheels
  - GPS receiver

- On-going spacecraft integrated testing
- Target completion: August 2009

# CanX-3/BRITE Constellation

- Canadian Advanced Nanospace Experiment 3  
Bright Star Photometry Constellation
- University of Vienna (CanX-3A/UniBRITE),  
Technical University Graz (CanX-3B/BRITE-Austria)
- Canadian Space Agency (CanX-3C/BRITE-Toronto,  
CanX-3D/BRITE-Montreal, proposal under review)
- Payload: 3-cm Aperture Telescope  
with Red or Blue filter
- Completion: 2009 (3A, 3B), 2010 (3C, 3D)
- Nanosatellite-class: 6.5 kg, 20x20x20 cm bus
- Features
  - GNB architecture
  - Three-axis stabilized to 1 arc-min with reaction  
wheels, star tracker

# CanX-4 & CanX-5

- Canadian Advanced Nanospace Experiment 4 & 5  
Two-spacecraft Formation Flying Demonstrator
- DRDC-Ottawa, Canadian Space Agency
- Payload: Formation Flying Computer, 20+ m/s  $\Delta V$   
SF<sub>6</sub> cold-gas propulsion
- Completion: 2010
- Nanosatellite-class: 7.5 kg, 20x20x20 cm bus
- Features:
  - GNB with redundant architecture
  - Launched jointly, separation after commissioning
  - Along track FF at 1000 m; Projected circular FF at 500/100/50 m
  - Intersatellite separation system, intersatellite communication
  - XPOD DUO with 20x20x40 cm, 15 kg capacity

# M3MSat

- Maritime Monitoring and Messaging Microsatellite  
AIS surveillance and short messaging system
- DRDC-Ottawa, CSA  
(Prime contractor: COM DEV Ltd)
- Payload: AIS Receiver (COM DEV Ltd)
- Completion: 2011
- Microsatellite-class:  
>75 kg, 60x60x80 cm bus
- Features
  - Nadir pointing
  - Leverages GNB technologies,  
with enhanced performance
  - SFL responsibility includes  
OBC, ACS, Power, Assembly Integration and Testing

# Miniature Technology

- Architecture
  - Redundant components with cross-strapping for improved reliability
  - Scalable performance: add or subtract subsystem, scale component up or down
- Payload
  - Up to 17x13x8 cm, 2 kg payload in a 20x20x20 cm, 7.5 kg bus
  - Fixed appendages

# Miniature Technology

- On Board Computer
  - 60 MHz ARM7TDMI,
  - 512+ MB flash, EDAC RAM
  - Up to three computers in each spacecraft (HKC, ACC, Payload)
- Power: TJ cells, Li-ion battery
  - 9+W generation, 3.6-4V bus,
  - peak power tracking, battery charge/discharge regulator
- Communication: UHF uplink, S-band downlink
  - 4 kbps uplink, 1 Mbps+ downlink
- Attitude Determination and Control: Passive to Full 3 axis
  - Magnetometer, coarse / fine sun sensors, rate sensors, star tracker
  - Permanent magnet, hysteresis rods, magnetorquer, reaction wheel

# Miniature Technology

- Propulsion: Cold gas, SF<sub>6</sub>
  - Up to 30 m/s delta-V for 7.5 kg spacecraft
  - Scalable to higher performance chemical
- Structure: Al or Mg alloys
  - Up to 17x13x8 cm, 2 kg payload in a 20x20x20 cm, 7.5 kg bus
- Thermal Control
  - Mostly passive, active control as required
- XPOD Family of Separation Systems
  - Accommodate spacecraft up to 20x20x40 cm, 15 kg

# Launch

- Mission requirements necessitates complete control of launch
  - Streamlined launch management process results in cost-effective, responsive access to space
  - Flexibility to *match* mission requirements with available launch
- Nanosatellite Launch Service (NLS)
  - Shared launch opportunity
  - Other spacecraft developers are invited to join as Launch Partners in the NLS launches
  - Small number of spacecraft, each spacecraft given a dedicated XPOD
  - Minimizes programmatic and technical risks to all spacecraft participant

# Previous Launches

- Nanosatellite Launch Service 1 on Rockot-MOM  
30 Jun 2003 into Sun Synchronous, 827 km, 06:00 LTDN
  - CanX-1, AAUSat-1, DTUSat
- Nanosatellite Launch Service 2 on Rockot-MOM  
30 Jun 2003 into Sun Synchronous, 827 km, 06:00 LTDN
  - QuakeSat
- Nanosatellite Launch Service 3 on SSETI-Express  
25 Oct 2005
  - NCUbe-2, UWE-1, XI-V
- Nanosatellite Launch Service 4 on PSLV-C9  
28 April 2008 into Sun Synchronous, 627 km, 10:15 LTDN
  - CanX-2, AAUSat-II, COMPASS-1, Cute-1.7+APD II, Delfi-C3, SEEDS
- Nanosatellite Launch Service 5 on PSLV-C9  
28 April 2008 into Sun Synchronous, 627 km, 10:15 LTDN
  - NTS (originally planned on the PSLV-C12)

NTS  
SEEDS  
Delfi-C3  
SEEDS  
AAUSat-II  
COMPASS-1  
Cute-1.7+APDII

# Upcoming Launches

## Upcoming launch:

- Nanosatellite Launch Service 6 on PSLV-C16  
Q3 2009 into Sun Synchronous, 670 km, 10:15 LTND  
– AISSat-1, +1 partner

## Planned NLS launches:

- Q1 2010 into Sun Synchronous, 800 km, 10:15 LTND  
– UniBRITE, BRITE-Austria
- H2 2010 into Sun Synchronous, 600 km, 06:00 LTND  
– CanX-4&5, others  
– LSA under discussion, to be finalized

- ❖ Independent launches for non-SFL spacecraft may be scheduled on a case-by-case basis

# Conclusion

- **Generic Nanosatellite Bus**
  - Flexible architecture with redundancy and scalable performance
  - Directly scalable to larger spacecraft using the same components for even higher-performance
  
- **Cost-effective, responsive mission**
  - Advanced missions using nanosatellites and microsatellites
  - Combined approach in mission analysis, spacecraft development, launch and on-orbit operations
