From 3U to 6U

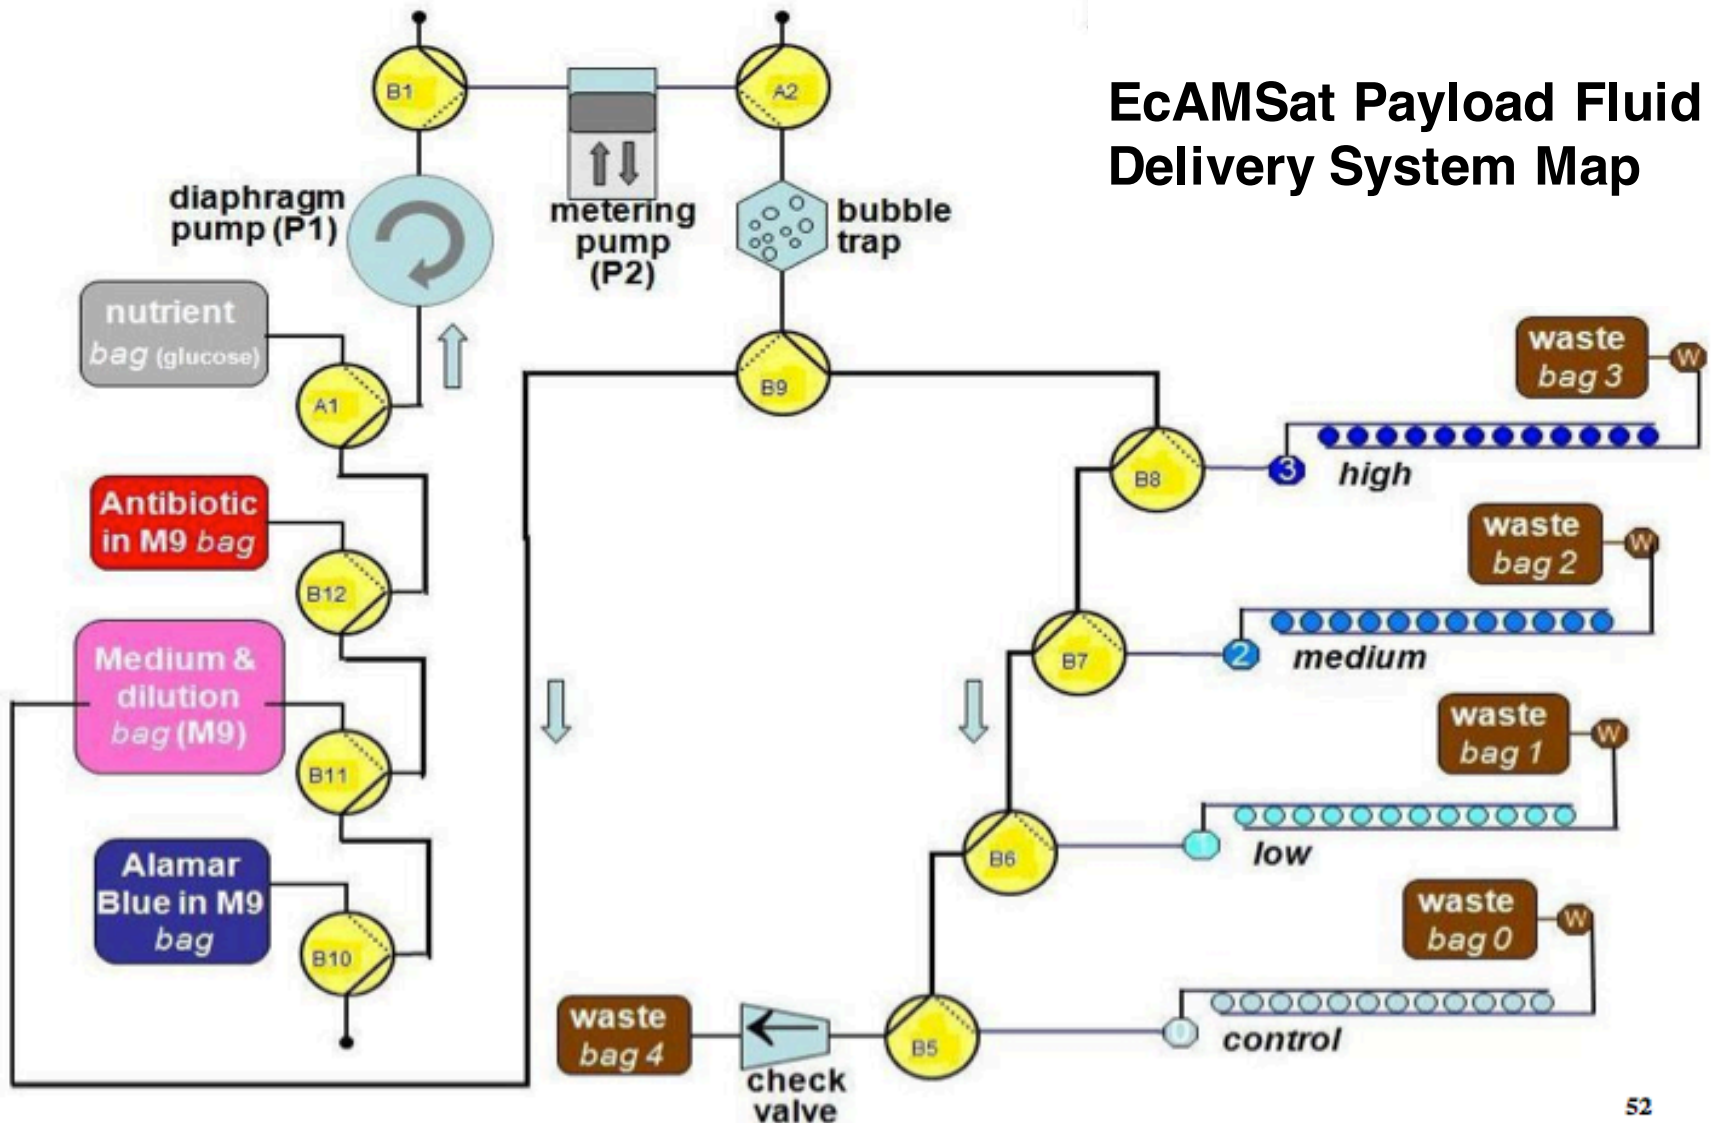

Payload

- Determine how microgravity alters the antibiotic resistance of uropathogenic *E. coli* (UPEC) to Gentamycin
- PharmaSat payload, with finer filter size to accommodate change from yeast to *E. coli* ($0.45\ \mu\text{m}$ to $0.2\ \mu\text{m}$)
- *E. coli* population is measured using optical density of well, utilizing Alamar Blue dye.

Fluidics System Overview

EcAMSat Payload Fluid Delivery System Map

EcAMSat Fluidic Card

12 wells per bank:
 ■ 6 wild type strain
 ■ 6 mutant *rpoS* strain

What is in store for EcAMSat

- **Finding a launch for a 6U in a suitable orbit**
 - Thermal considerations
 - Lack of 6U deployers
- **Ongoing payload evaluation**
 - Enhancing reliability of fluidics system
 - Optimizing the fluidics timeline to ensure optimal fluid exchange and minimize backpressure and filter clogging
- **Flight hardware**
 - Ready for flight, waiting in bonded storage
