# Cubesat Remote Data & Comms Transponders

**A satellite relay channel for Amateur Satellite User data anywhere on earth.**

Engineering Educational Objective:

One or two semester student engineering projects

Individual engineering responsibility

Low cost

Driven to completion

Where Failure (learning) is an option

# Cubesat Remote Data & Comms Transponders

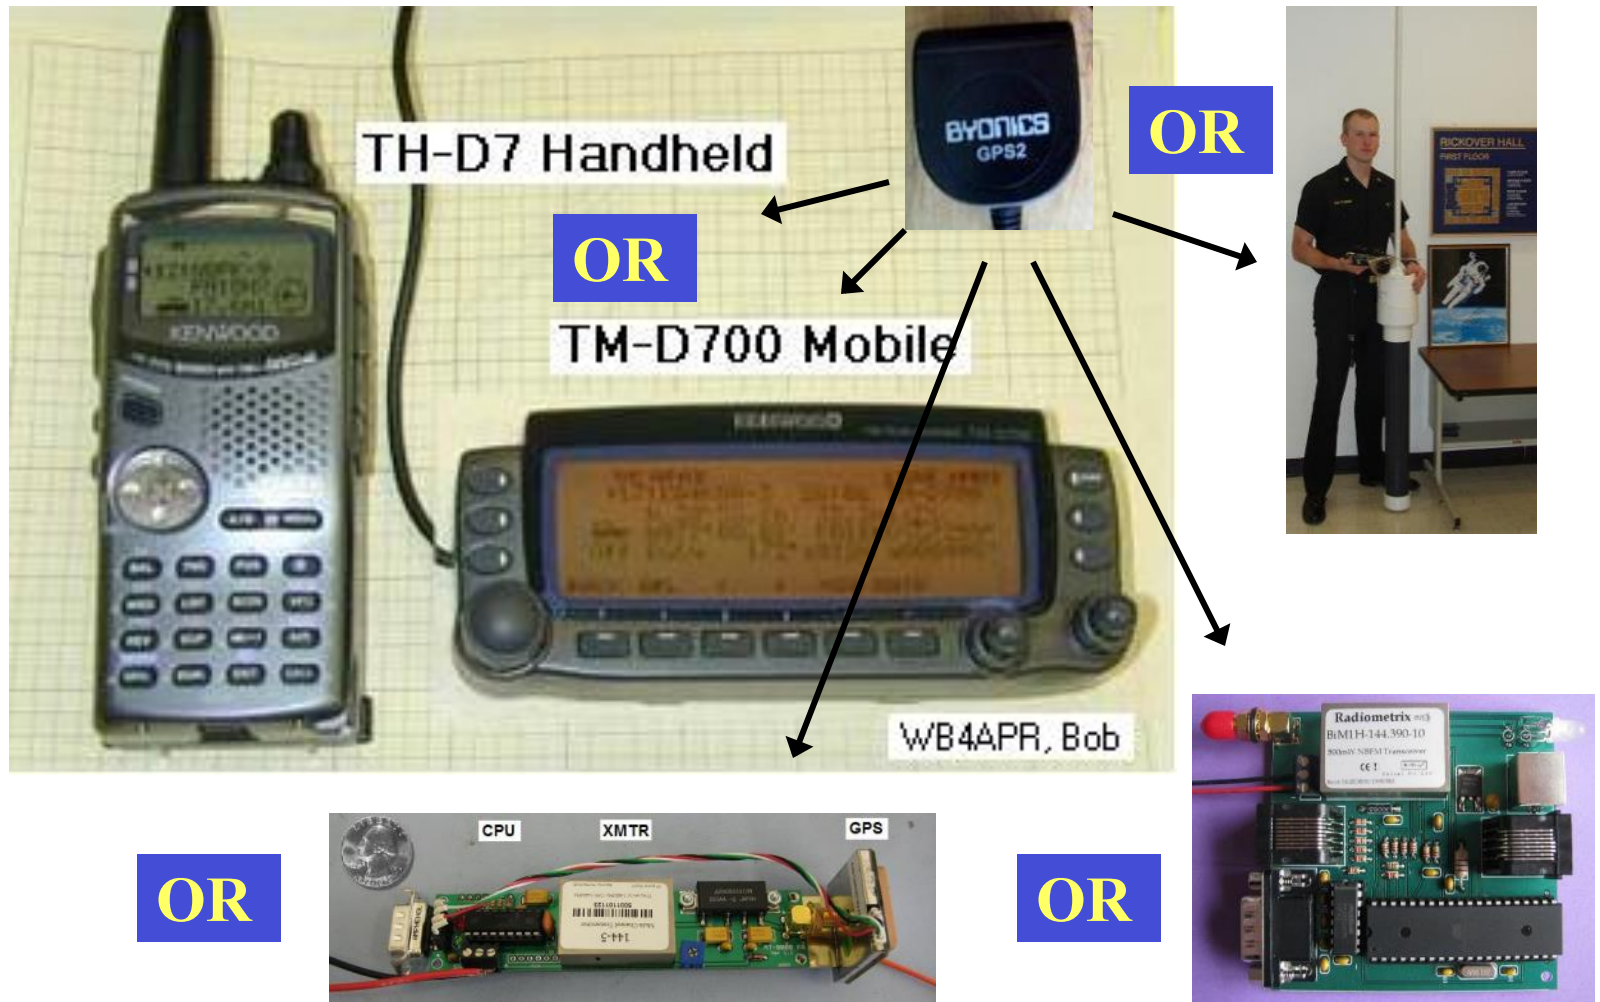

**A satellite relay channel for Amateur Satellite User data anywhere on earth.**

Problem with Spacecraft segment focus:

Multi-year, often delayed, expensive small cubesats do not well meet these particular undergraduate objectives.

# Solution: Ground Terminal Applications Focus

Supports Student Experimenters world wide

# Quicker Student involvement using a Ground Terminal Operational Concept

## Ground Terminal Applications Focus (force tracking and text-messaging)

**Supports Student Experimenters**  
**School missions/movements**  
**Theater area communications**  
**and Emergency Response Comms**

**The Yard Patrol Craft**

**13th Co Army/Navy Football Run  
Comms by USNA Radio Club  
W3ADO**

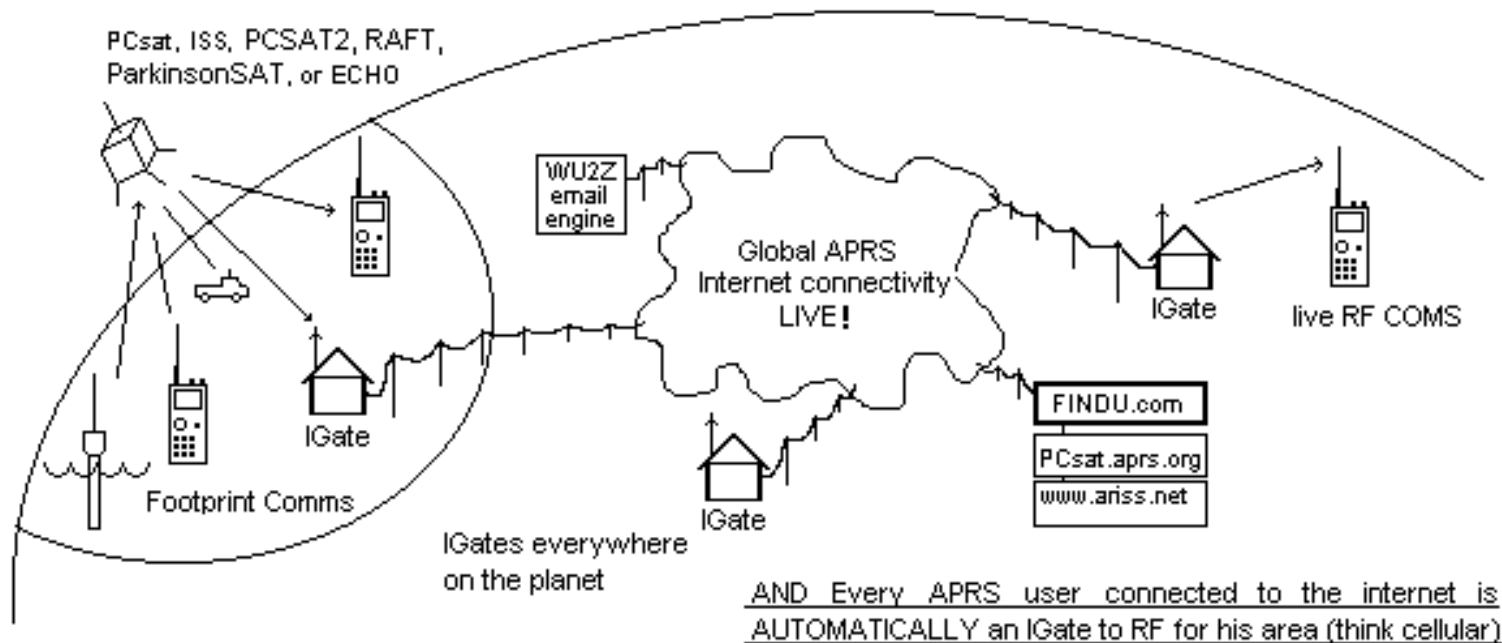

30 Nov 2001

Tactical situational awareness

# Findu.com Telemetry Plots

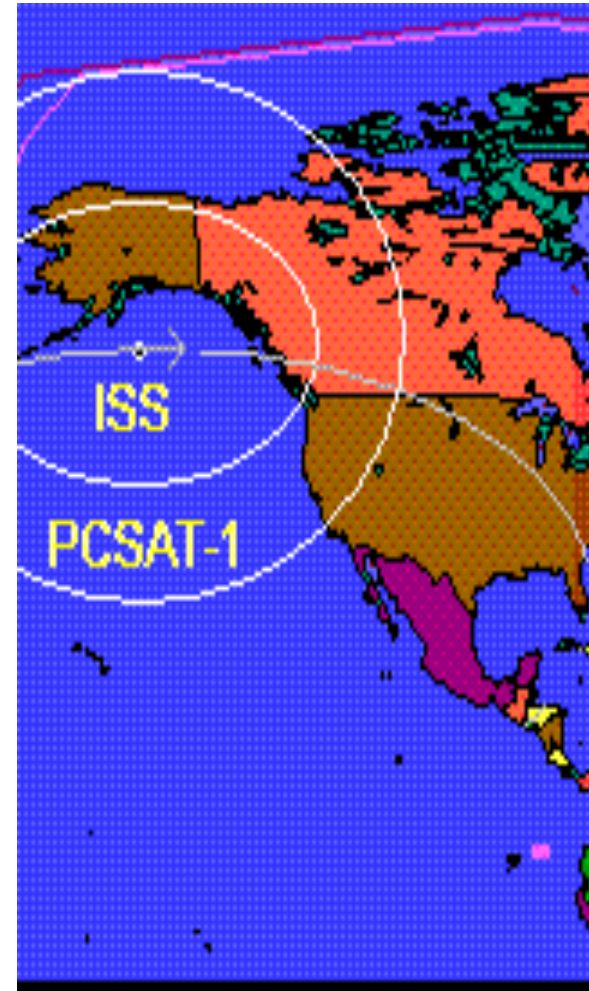

Live Example: [www.aprs.org/wb4apr-15.html](http://www.aprs.org/wb4apr-15.html)

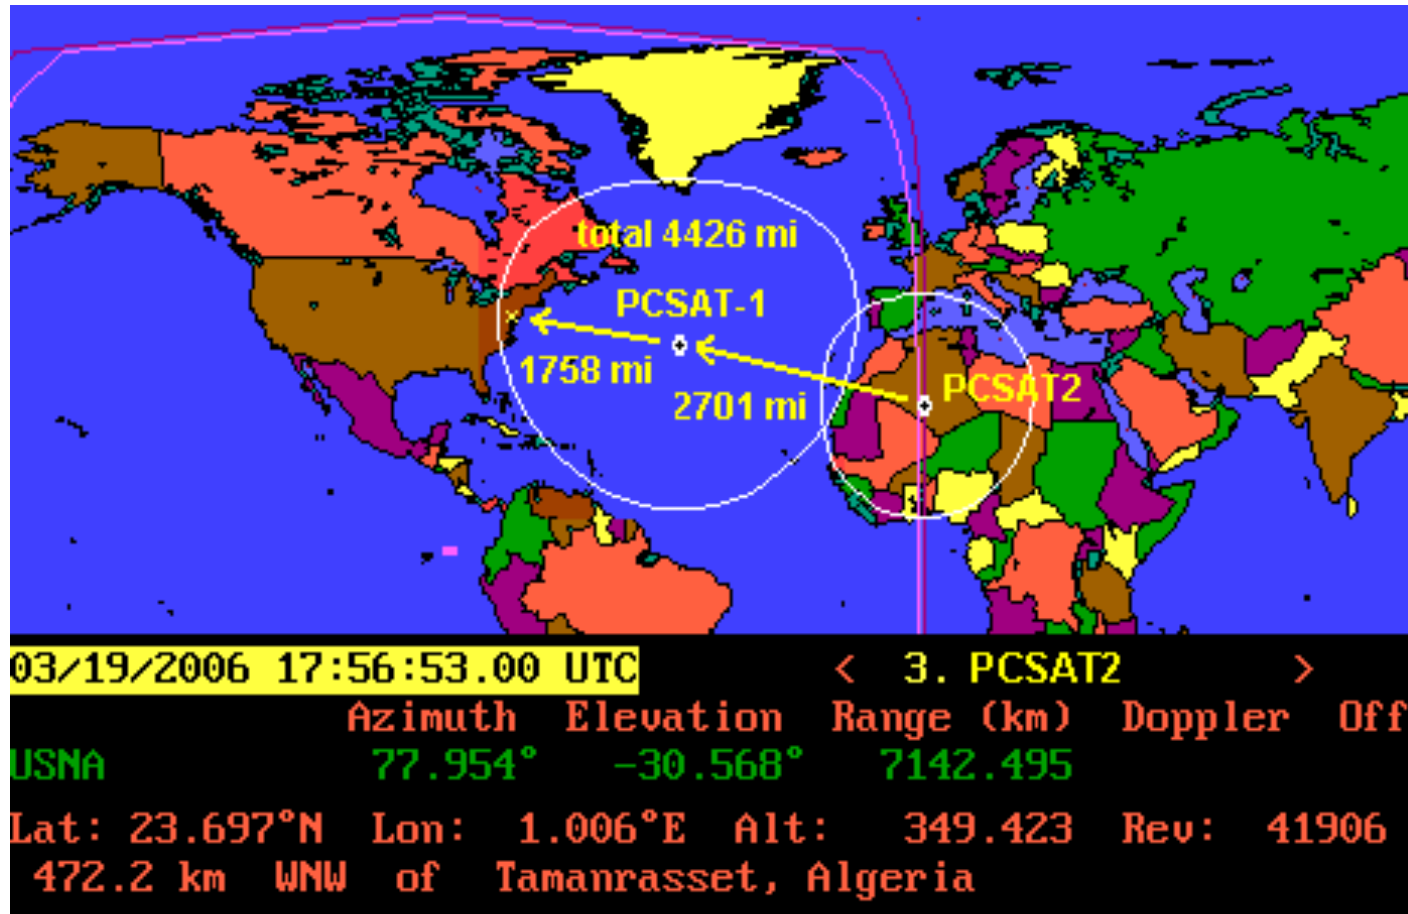

# Our Amateur Satellite Data Relay Problem

- ISS – Always there, but does not cover the poles
- PCSAT-1 since 2001, but only works when it wants to...
- **NEED** a continuous presence in space for these relays!
- The **more** the better!

# Dual Hop Operations with PCSAT-1 and PCSAT2:

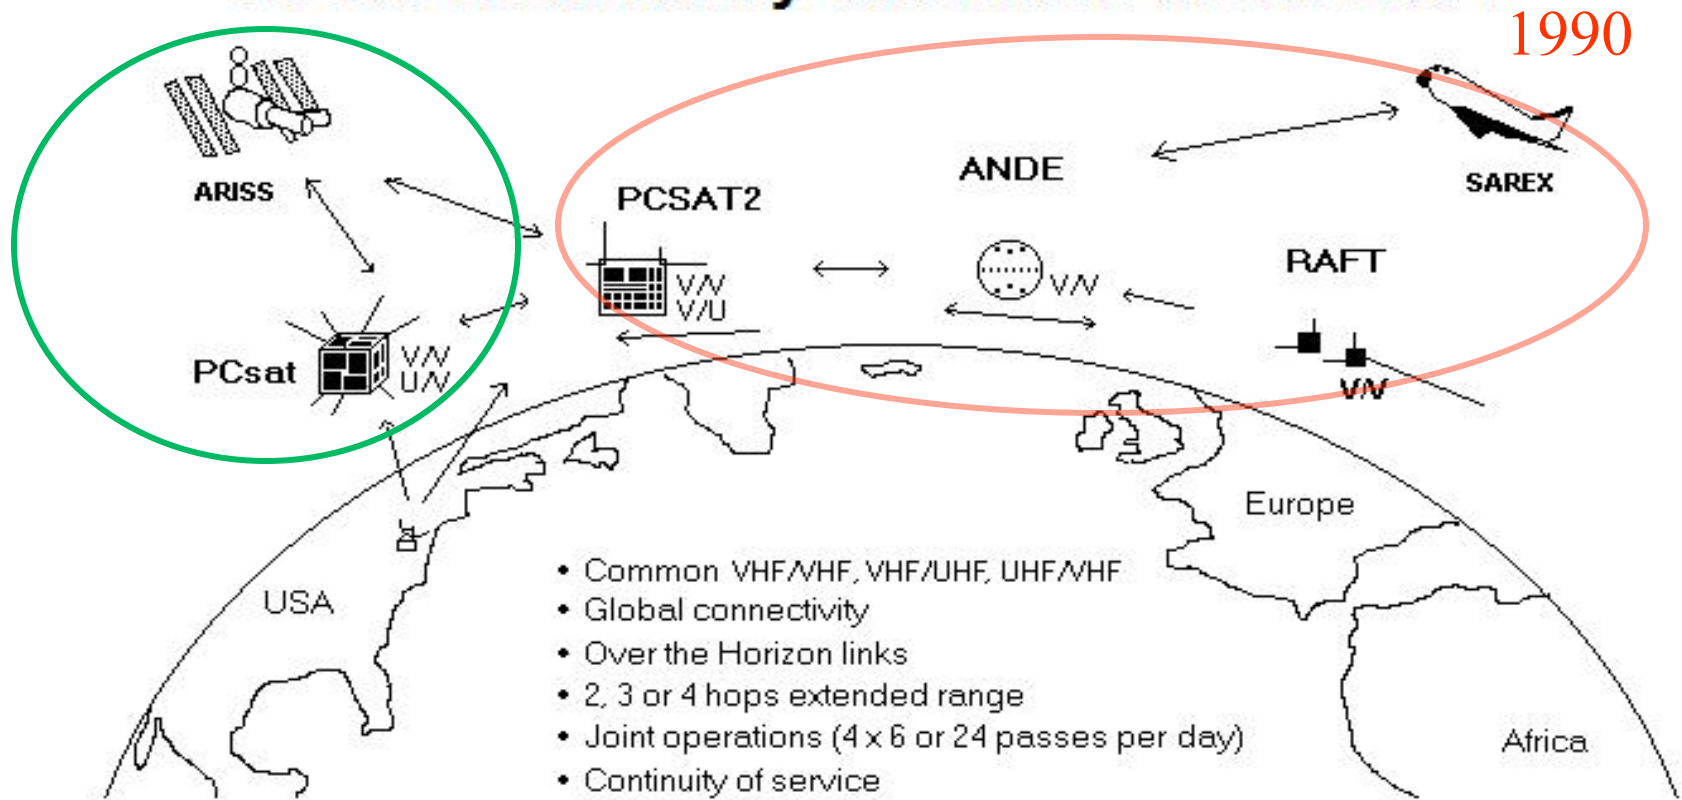

During the March 2006 joint PC1<=>PC2 operations period, numerous dual hop elemetry and user packets were observed. This telemetry packet from PCSAT2 is just about as far as we can get with satellite-to-satellite-to USNA. Notice how few European or USA users were in the footprint making it more probable that PCSAT-1 could hear PCSAT2's signal. WB4APR

APRS Global data network

All on 145.825 MHz

# APRS in Space

## Automatic Packet Reporting System

- 2001 PCSAT-1 Prototype Comm (semi-operational)
- 2006 PCSAT2 on ISS (returned after 1 year)
- 2007 ANDE de-orbited in 1 year
- 2008 RAFT de-orbited in 5 months
- 2007 Present ISS semi-operational due crew settings
- 2014 CAPE II AX.25 U of Louisiana (Nick Pugh)
- 2015 PSAT APRS and PSK31

APRS space frequency is published as 145.825

See live downlink on <http://pcsat.aprs.org> and [www.ariss.net](http://www.ariss.net)

# Huge reduction from transponders on PCSAT's 1,2, ANDE and RAFT missions

Psat USNA-0601

Earlier reductions to 5" cubesat on RAFT (2006)

4:1

Now reduced 18:1 in volume/mass for 4" cubesat 2009

APRS Global data network

# AX.25

A single 3” Square card

145.825 MHz

**Mission:** Remote Data Relay, Data Exfiltration, Remote Sensor Relay

**Benefit:** Support Space Education on the ground through space applications and student experimental access

**Hardware:** VHF simplex data Xsponder 145.825 MHz

**Size/Mass:** < 10 cu.in (1 PCB 3.4” square), <0.1kg

**Power:** < 1W orbit average, 5 volts.

**Integration Requirement:** Simply, on/off (or \*)

**Structure Impact:** Needs 19” thin wire whip antenna (1 cu.in)

**Benefit to Spacecraft:** High visibility to worldwide educational institutions, fosters collaboration, orders of magnitude greater student experimental access to space systems (ground segment). \* Independent back-up telemetry command/ control channel, RS232 serial data, 16 on/off discrettes, backdoor reset capability. Worldwide Telemetry Beacon access via global station network.

# APRS Terrestrial Data Relay Network

---

- Supports over 20,000+ terrestrial users and experimenters.

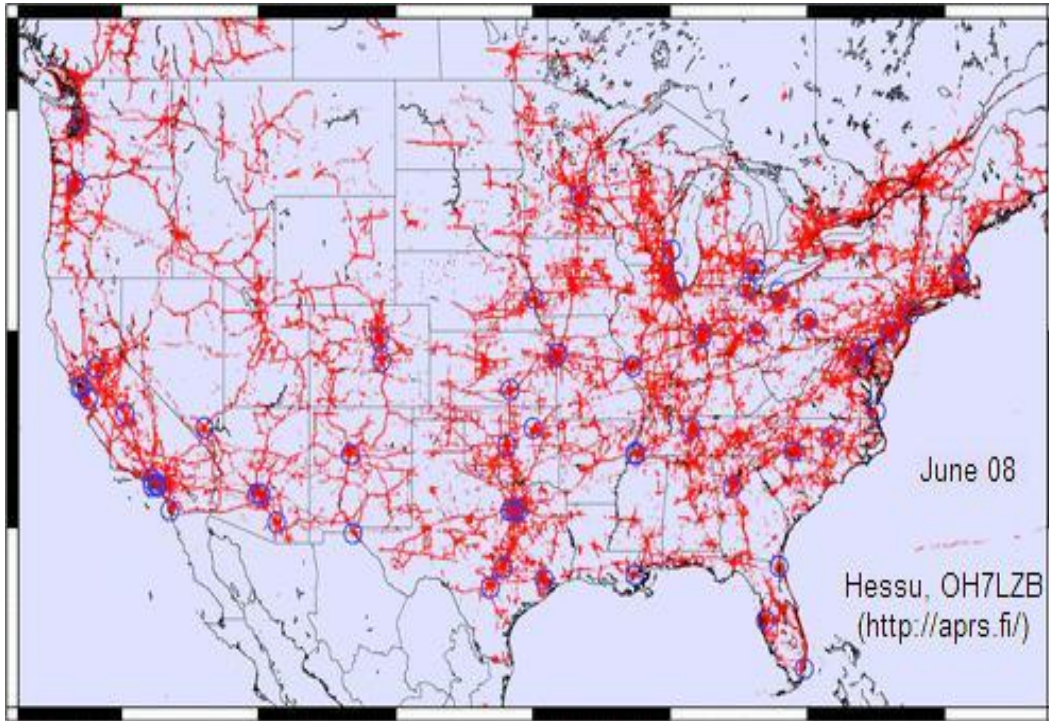

- But stops at the shoreline and has huge holes in the wilderness

# There are terrestrial network holes everywhere

---

Just like cell coverage,

Maybe 70% of USA users are actually out of range of the terrestrial network in rural areas

And the terrestrial user does not know when the next APRS satellite is in view...

# Our next QIKCOM-1 has an alert Beacon

When over USA, a 1 minute beacon on terrestrial frequency:

- **Won't** be heard amongst the din on the terrestrial freq in coverage areas
- **Will** be heard by mobile out of range of terrestrial connectivity
- Format is QIKCOM-1: 145.825MHz Tune to operate
- One-button satellite access!
- On the front panel of the radio!

# Remote Sensor Baseline

- **Naval Academy Student Project** •
- \* If free-floating, do not disturb.
- \* If aground, move to deep water and advise [bruninga@usna.edu](mailto:bruninga@usna.edu)
- \* If later than 30 Nov 2006, recover and advise above.

2006      15:1 reduction      2008

See Buoy Location and Telemetry at  
<http://www.ew.usna.edu/~bruninga/buoy4.html>

# Remote Buoy Baseline Test – Success of 1 min Xmit rate

## Number of Buoy Packets Received Per Day via PCSAT-1 and PCSAT2

# If it flies, it could have an APRS transponder on it

---

- If it is off the ground we want a TRANSPONDER on it!
- Range at 5000' = 100 miles

# QuickLook: Global APRS Data Network

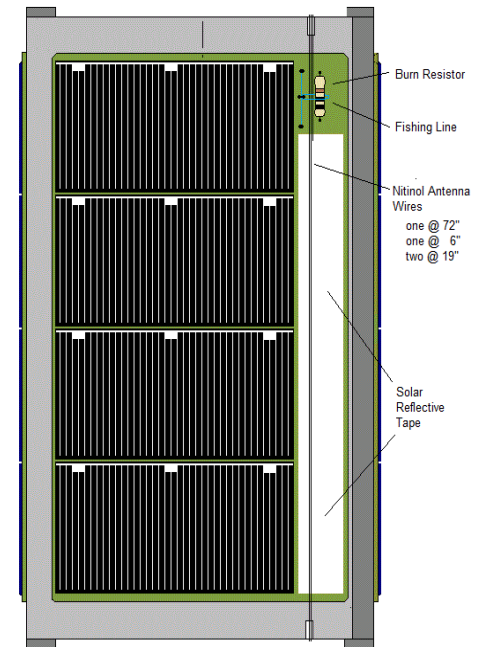

---

- [aprs.fi](http://aprs.fi) - Every Packet on Earth
- [ariss.net](http://ariss.net) - Every packet via ISS
- [pcsat.aprs.org](http://pcsat.aprs.org) – Every packet via PCSAT

# Psat Transponder & Aux Payload

75% Payload Space Available! (only 50% shown here)

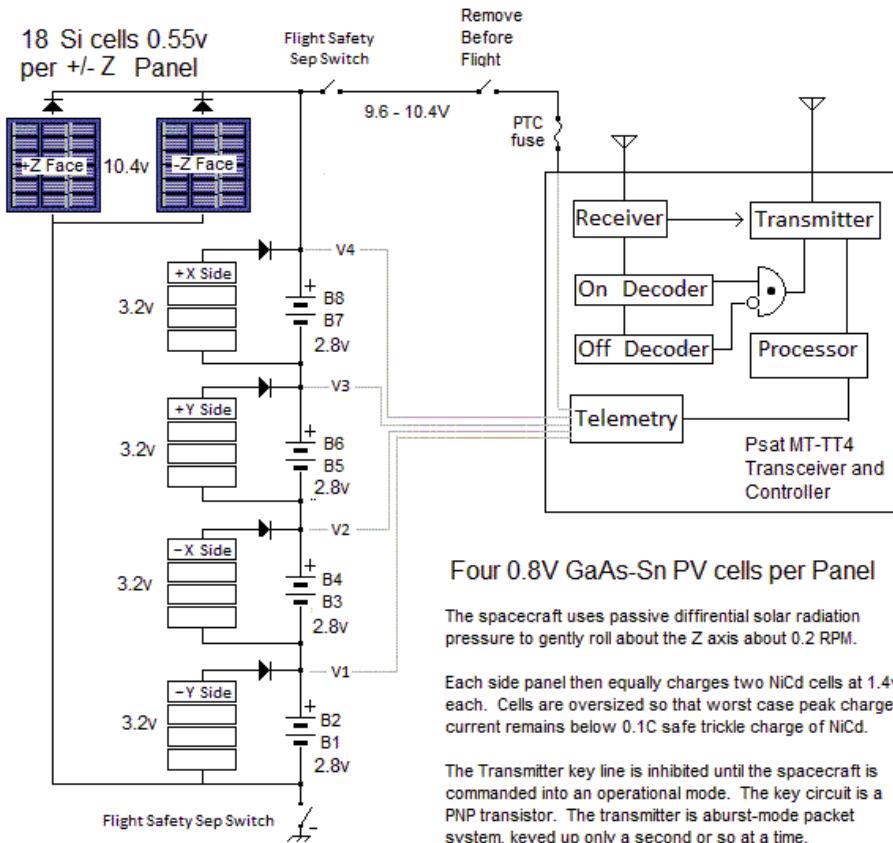

- **18 cu.in for Transponder**
- **External 19" whip antenna**
- 68 cu.in for Aux Payload (SPMS?)
- Aux payload gets 4" external panel
- Aug payload gets .5 kg – self contained
- 1 to 3W average power for aux payload

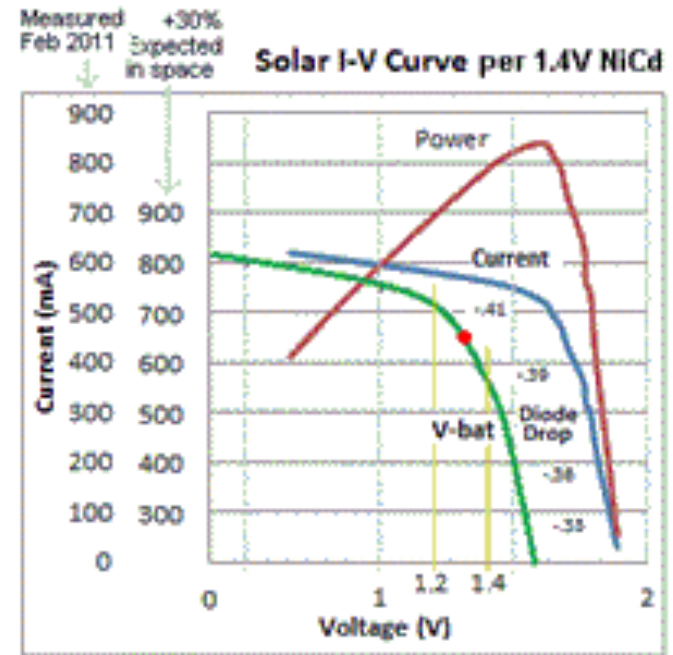

# PSAT Unique parallel-charge EPS Design

- Uses 2 NiCd cells per solar panel

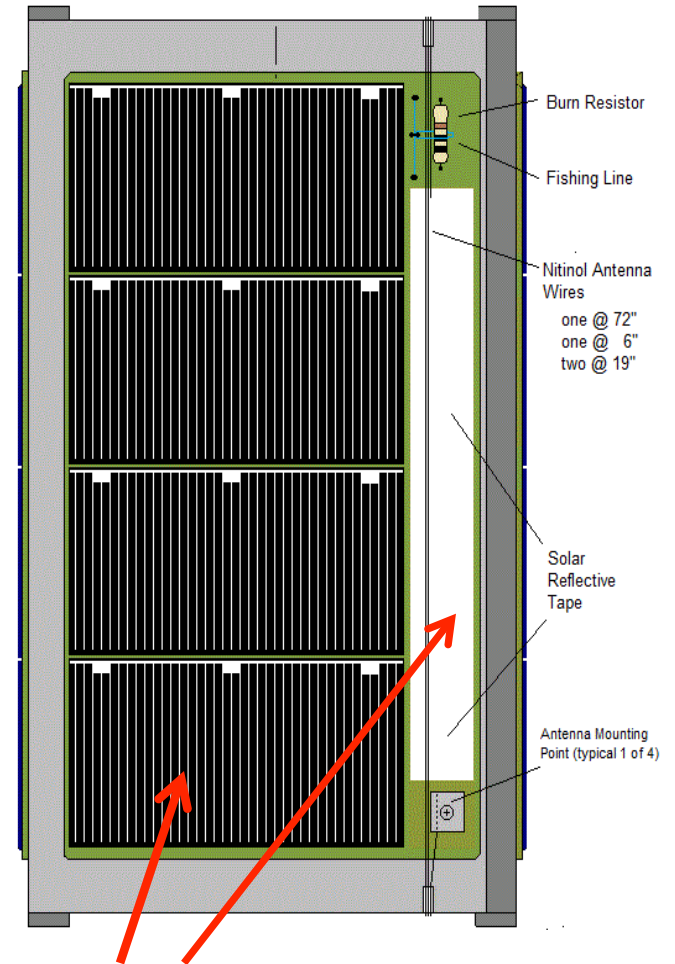

## Passive Battery Charge Regulation

Peak Power 650 mA and 1.3V = 0.85W

# Unique Power Attitude – Z coil ADCS

- Uses only one Z coil for attitude Control
  - Fires only within +/- 20 deg of Equator
  - Solar Panel angle better than 95% power
  - Higher reliability
  - Passive Spin maintenance

Differential Radiation Spin

# PSAT's mass is centered in Z

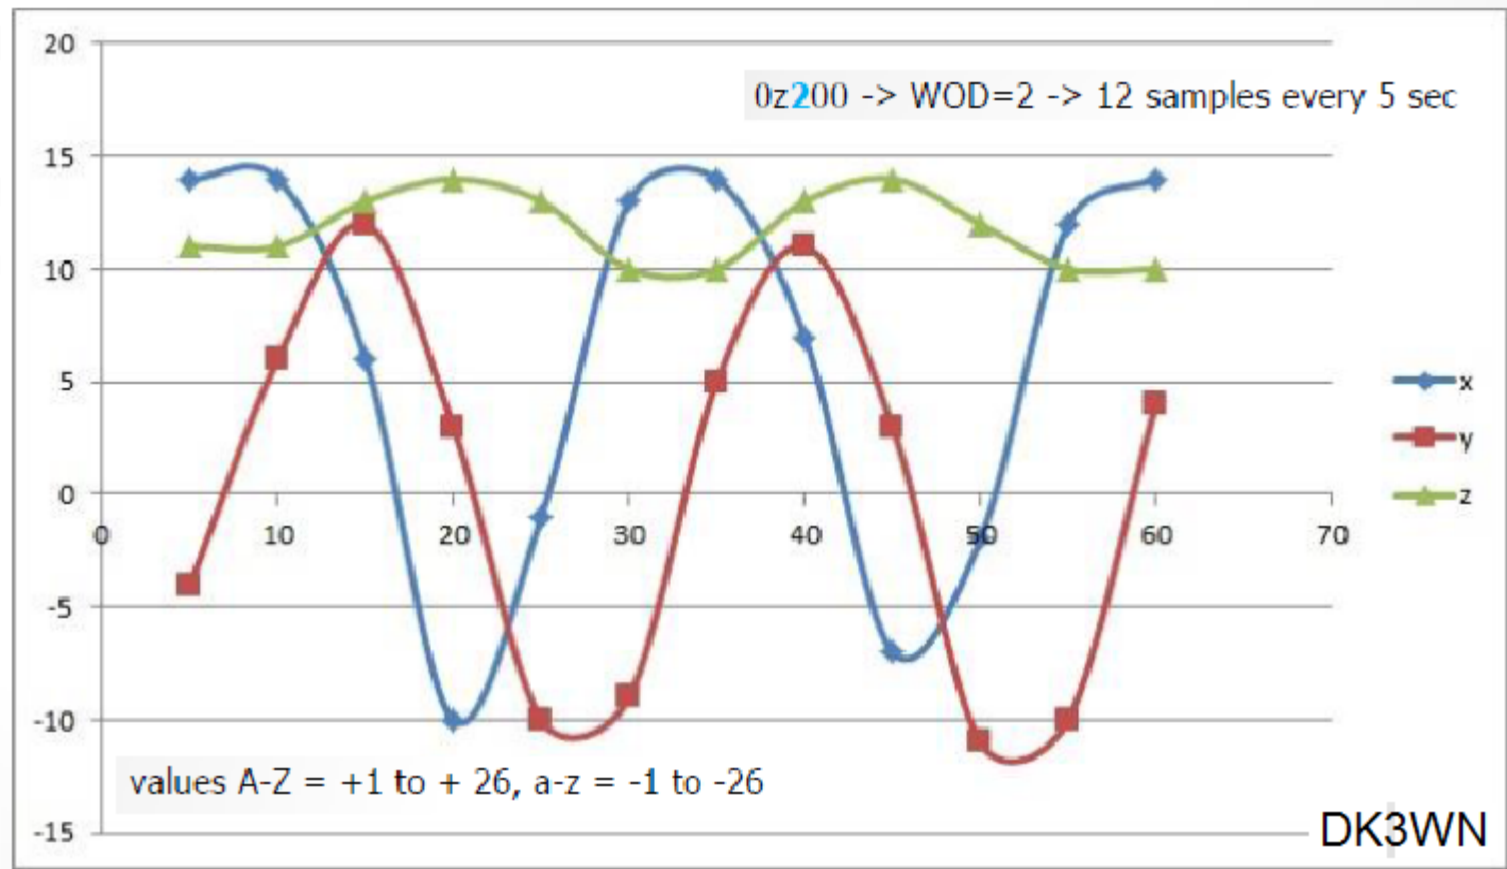

- For Maximum MOI about Z
- Batteries to outside for MOI & Shielding
- Stainless steel belt around everything

# PSAT BS2 CPU telemetry – spin analysis

```

# How not to Make a Satellite

Make sure it fits

Stop adding neat features...

# The boards stack across and zero clearance

---

- For Maximum MOI about Z
- Batteries to outside for Shielding

# Chip Radiation Shielding?

Epoxy Lead squares over critical chip dies

# Our Next APRS Satellites

## QIKcom-1

- APRS system (PSAT)
- Release from ISS in October 2015
- flies on host spacecraft (28V, no solar panels or ADCS)

## QIKcom-2

- launch December 2015
- 1st APRS TouchTone Satellite
- APRStt is a complete two way system that enters data using DTMF and receives APRS information by synthesized voice response.

# QIKCOM-2 converts DTMF to both Voice and APRS and APRS data to voice!

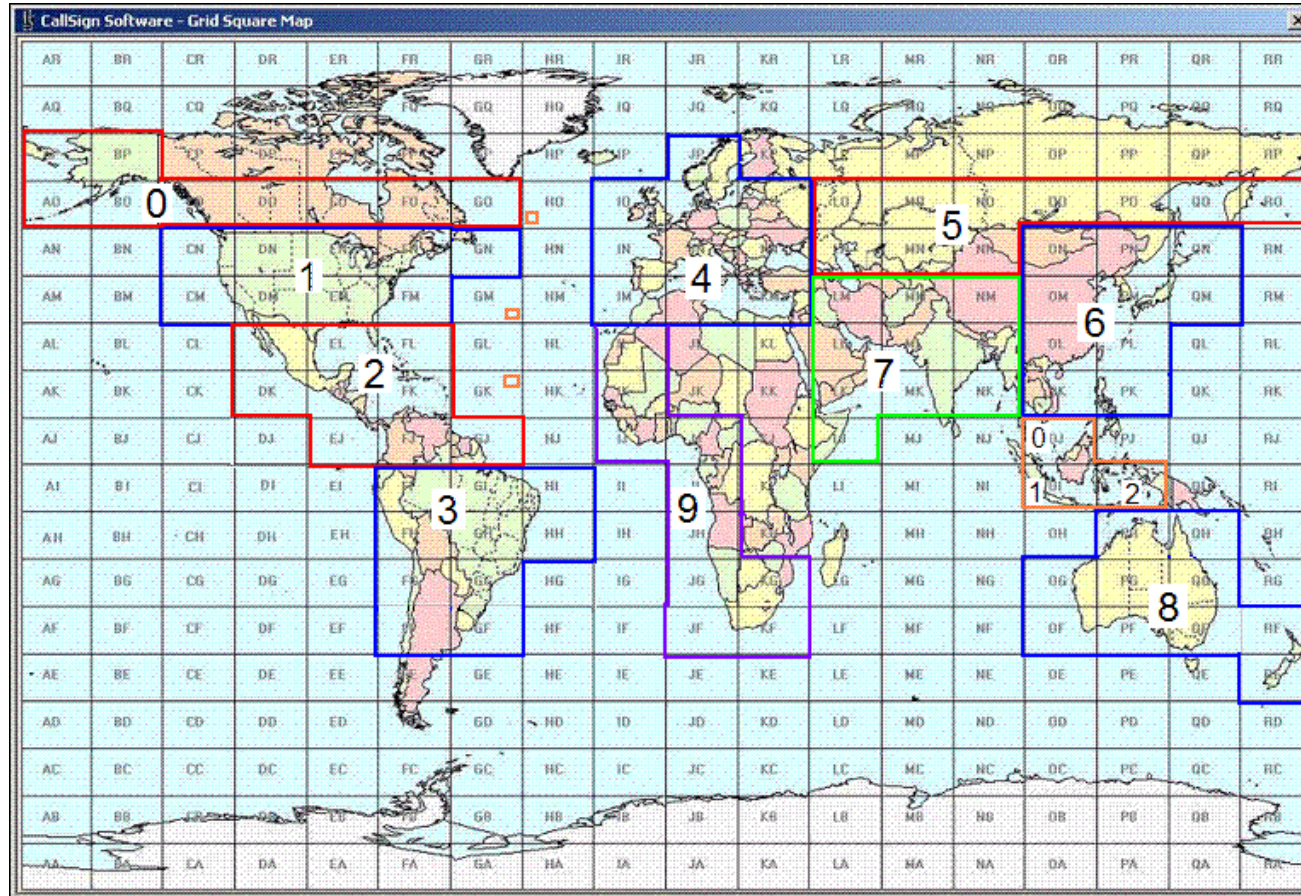

With QIKCOM-2, not just APRS but DTMF data sources can be relayed among all users.

# The 324 Grid system has 99 grids...

- since 1927 or so for radio
- Most of the time, most of what is said, has been said before
- Q2 has 99 messages and 99 modifiers

## One Group -- For Possible **RELIEF EMERGENCY** Use

**ONE** Everyone safe here. Please don't worry.

**TWO** Coming home as soon as possible.

**THREE** Am in \_\_\_\_\_ hospital. Receiving excellent care and recovering fine.

**FOUR** Only slight property damage here. Do not be concerned about disaster reports.

**FIVE** Am moving to new location. Send no further mail or communication.

**SIX** Will contact you as soon as possible.

**SEVEN** Please reply by Amateur Radio through the amateur delivering this message.

**EIGHT** Need additional \_\_\_\_\_ mobile or portable equipment for immediate emergency use.

**NINE** Additional \_\_\_\_\_ radio operators needed to assist with emergency at this location.

**TEN** Please contact \_\_\_\_\_. Advise to standby and provide further emergency information.

**ELEVEN** Establish Amateur Radio emergency communications with \_\_\_\_\_ on \_\_\_\_\_ MHz.

**TWELVE** Anxious to hear from you. No word in some time. Please contact me as soon as possible.

**THIRTEEN** Medical emergency situation exists here.

**FOURTEEN** Situation here becoming critical. Losses and damage from \_\_\_\_\_ increasing.

**FIFTEEN** Please advise your condition and what help is needed.

**SIXTEEN** Property damage very severe in this area.

**SEVENTEEN** RLACI communications services also available. Establish RLACI communication with \_\_\_\_\_ on channel \_\_\_\_\_.

**EIGHTEEN** Please contact me as soon as possible at \_\_\_\_\_.

**NINETEEN** Request health and welfare report on \_\_\_\_\_. (State name, address and telephone number.)

**TWENTY** Temporarily stranded. Will need some assistance. Please contact me at \_\_\_\_\_.

**TWENTY ONE** Search and Rescue assistance is needed by local authorities here. Advise availability.

**TWENTY TWO** Need accurate information on the extent and type of conditions now existing at your location. Please furnish this information and reply without delay.

**TWENTY THREE** Report at once the accessibility and best way to reach your location.

**TWENTY FOUR** Evacuation of residents from this area urgently needed. Advise plans for help.

**TWENTY FIVE** Furnish as soon as possible the weather conditions at your location.

**TWENTY SIX** Help and care for evacuation of sick and injured from this location needed at once.
