

# ***Nodes: A Flight Demonstration of Networked Spacecraft Command and Control***

***Saturday, August 6<sup>th</sup>, 2016***

*John Hanson, Jasper Wolfe,  
Ali Guarneros Luna, Ken Oyadomari,  
Rodolphe DeRosee, Cedric Priscal,  
Watson Attai*

***Funded by STMD via SSTP  
with additional support from Ames Research Center***

National Aeronautics and  
Space Administration

National Aeronautics and Space Administration

# Nodes Mission Summary

Mission Goal	Req'd	Ach'ved
Space-to-Ground Links	5	10+
Ground Command of S/C through Network	1	11
Perform Captaincy Negotiation	2	4
Collect Science Packets & Transfer to Ground	5	1,199 as of 7/27/16
Monitor S/C state-of-health	20 days	72 days and counting

## Based on Existing EDSN Designs/Hardware

- 1.5U solid Pumpkin Chassis
- Smartphone as main processor
- 6 Solar Panels
  - 4 identical 1.5U panels with 35 cells
  - 2 identical 1U panels with 15 cells
- MicroHard transceiver for S-Band downlink
- Lithium UHF transceiver for space-to-space
- StenSat UHF transmitter for beacon
- 4 RF Antennas
  - GPS and S-band patches on 1U faces
  - Lithium and beacon monopoles off 1.5U faces
- EPISEM radiation monitoring payload
- 4 18650 Li-Ion Batteries
- ACS – magnetometer and torque coils
- Novatel OEMV-1 GPS receiver
- 9 PCB subassemblies electrically inter-connected through a single backplane PCB

# Nodes Mission Objectives

- Flight demonstrate the **commanding of a satellite through a network of satellites** by transferring a command from the ground through a relay satellite to a target satellite and having the target satellite execute the command.
- Flight demonstrate the ability of a swarm to **autonomously negotiate** which spacecraft shall take the role of leader (Captain) based on criteria dependent on the states of the two satellites.
- **Collect and downlink time synchronized multipoint science data** using EPISEM instrument

National Aeronautics and  
Space Administration

# Simultaneous Multipoint Science Data Collection

Both spacecraft get a GPS solution

Activity Timeline Created

Spacecraft collect EPISEM data simultaneously

National Aeronautics and  
Space Administration

# Simultaneous Multipoint Science Data Collection

Crosslink session starts at  
preloaded UTC's

Lieutenant turns on UHF  
receiver at specific local clock  
time, corrected to UTC  
-> Low power solution

National Aeronautics and  
Space Administration

# Simultaneous Multipoint Science Data Collection

Captain requests data from Lieutenant

National Aeronautics and  
Space Administration

# Simultaneous Multipoint Science Data Collection

Lieutenant Responds with Data

National Aeronautics and  
Space Administration

# Simultaneous Multipoint Science Data Collection

Captain Sends Data to Ground Station

**Mission Objective met 5/18/16  
1,199 Packets Downlinked to Date**

National Aeronautics and  
Space Administration

# Autonomous Network Configuration

Captain Requests Negotiation Data  
from Lieutenant

Lieutenant Responds with Data

National Aeronautics and  
Space Administration

# Autonomous Network Configuration

Captain Promotes Lieutenant to Captain if Necessary

Lieutenant Acknowledges Promotion

**Mission Objective met 5/18/16  
Four Negotiations Held  
5/20/16: LT Promoted to CPT**

National Aeronautics and  
Space Administration

# Ground Commanding Through Network

**Mission Objective met 5/21/16  
11 Commands Executed by LT**

# Science with Swarms

- Probing Earth-Sun interactions with gradient measurements of magnetosphere properties
- Synthetic aperture radar
- Multi-point tomographic measurements
- Geopotential measurements
- Large sparse array telescopes
- Coronagraph based missions
- Explore properties of other planets, comets and near-Earth objects
