

# VACCO ChEMS™ Micro Propulsion Systems

## *Advances and Experience in CubeSat Propulsion System Technologies*

May 1<sup>st</sup>, 2018

**VACCO**

VACCO Proprietary Data – Shall Not Be Disclosed Without Written Permission of VACCO

# VACCO Industries

# Tyvak NanoACE Micro Propulsion System

- ***NanoACE Launched 7 July 2017***
- Contract with Tyvak Nano-Satellite Systems Inc.
- Occupies Center 1U of 3U Cubesat
- Provides Attitude Control, Divert & Delta-V

Photo: Terran Orbital

# NASA/Tyvak CPOD Micro Propulsion System

- Contract with Tyvak Nano-Satellite Systems Inc.
- CPOD: NASA Cubesat Proximity Operations Demonstration
- (2) Flight Systems Delivered
- Occupies Center 1U of 3U Cubesat

Photo: Terran Orbital

# CPOD Micro Propulsion System Overview

## System Overview

All-Welded Aluminum Alloy Construction

Eight 10mN Cold Gas Thrusters

**174 N-S Total Impulse, 31 m/s Delta-V**

0.10 mN-S Minimum Impulse Bit

1U Center Manifold, Clamshell Configuration

510 grams Self-Pressurizing R236fa Green Propellant

Smart System with Integral Microcontroller

RS422 Digital Interface

Integral Sensor Suite

Total "Wet" Mass: 1270 grams

# JPL Mars Cube One (MarCO) Mission

## Mission Objective:

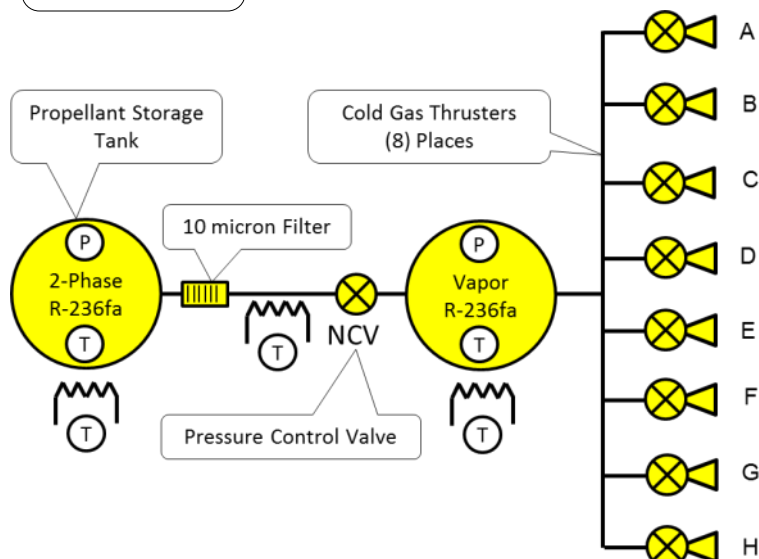

Provide an 8kbps real-time relay for  
InSight's Entry, Descent and Landing at  
Mars

*Two Units will be Launched with the  
InSight Mission May 2018*

# JPL MarCO Micro Propulsion System

First Interplanetary Cubesat

Launch with InSight Lander, May 2018

Smart, Self-Contained Propulsion System:

- ⊕ Contract for (2) Flight Systems
- ⊕ **755 N-Sec Total Impulse**
- ⊕ 3490 gram Wet Mass

System-in-a-Tank Design Including:

- ⊕ Propellant Storage & Feed System
- ⊕ (4) Axial & (4) RCS 25mN Thrusters
- ⊕ Controller & Sensor Suite

Two Interrupts Against Leakage

Low Power Continuous Power (<15 watts)

All-Welded Aluminum Alloy Construction

Microcontroller Driven:

- ⊕ RS422 Digital Interface
- ⊕ Controls Burn Type & Duration
- ⊕ Closed-Loop, Variable Thrust Control
- ⊕ (3) Settable Thermal Control Zones
- ⊕ (3) Power Supplies, (9) Valve Drivers

# JPL/MSFC Near Earth Asteroid Scout Mission

## Mission Objectives:

- Detect, rendezvous with and flyby a Near Earth Asteroid (NEA) target
- Characterize physical properties: volume, spectral type, spin mode and orbit
- $\geq 80\%$  coverage imaging at  $\leq 50$  cm/px
- $\geq 30\%$  coverage imaging at  $\leq 10$  cm/px

Main Propulsion:  $\sim 80\text{m}^2$  Solar Sail

# NEA Scout Micro Propulsion System

Smart, Self-Contained Cold Gas Propulsion System based on MarCO:

- ⊕ Contract for (1) Flight System
- ⊕ **500 N-Sec Total Impulse**
- ⊕ 2600 gram Wet Mass

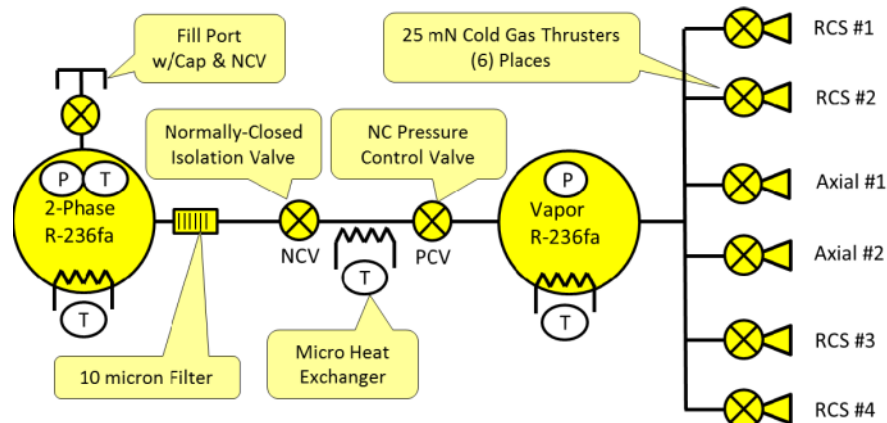

System-in-a-Tank Design Including:

- ⊕ Propellant Storage & Feed System
- ⊕ (2) Axial & (4) RCS 25mN Thrusters
- ⊕ Controller & Sensor Suite

Three Interrupts Against Leakage

Power: <9 watts while Firing

All-Welded Aluminum Alloy Construction

# SWRI CubeSat Mission to Study Solar Particles (CuSP)

## CuSP Mission Objectives:

1. Study Solar Particles in interplanetary space
2. Be a Pathfinder for creating a network of “Space Weather Stations”
3. Strengthen the case for CubeSats as a viable platform for performing ‘High Value’ Science
4. Raise the TRL of the SIS instrument for future missions

# CuSP Micro Propulsion System

Smart, Self-Contained Cold Gas Propulsion System based on MarCO:

- ⊕ Contract for (1) Flight System

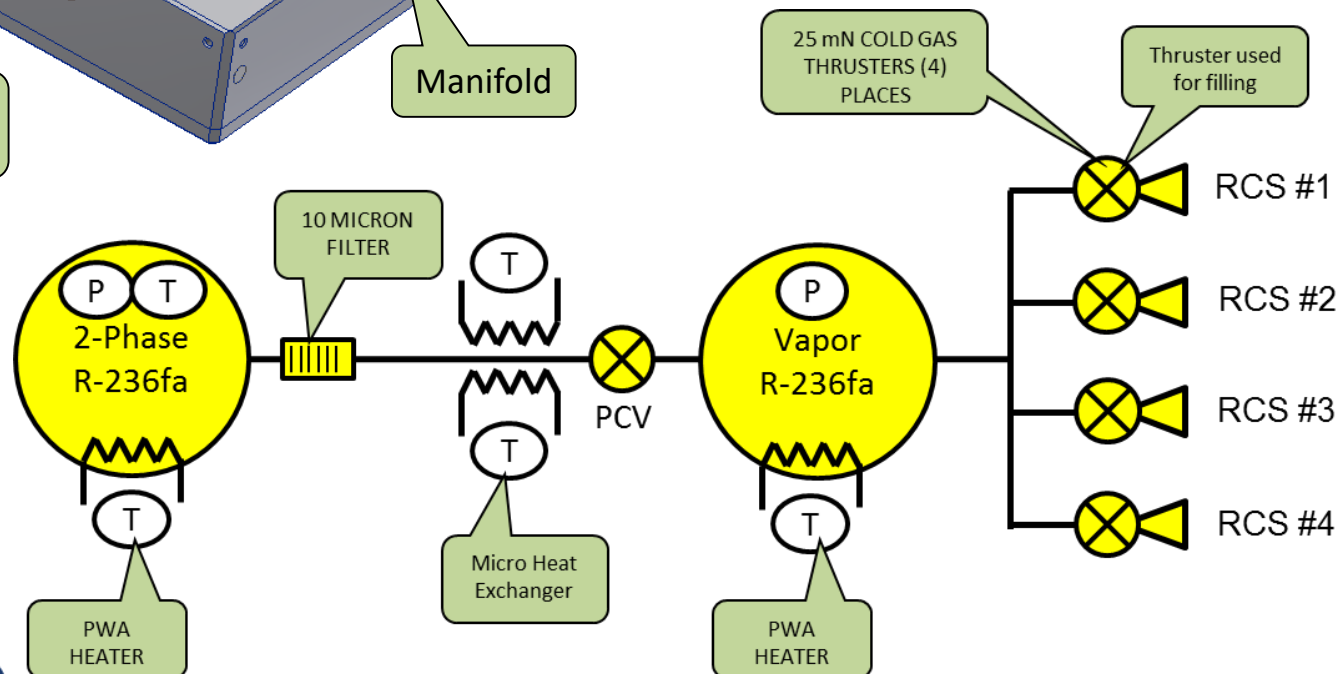

System-in-a-Tank Design Including:

- ⊕ Propellant Storage & Feed System
- ⊕ (4) RCS 25mN Thrusters
- ⊕ Controller & Sensor Suite

Two Interrupts Against Leakage

Power: <12 watts while Firing

All-Welded Aluminum Alloy Construction

# JAXA Nano Impactor (Omotenashi) CubeSat

## OMOTENASHI:

- Lunar mission designed jointly by the Japan Aerospace Exploration Agency (JAXA) and the University of Tokyo.
- Will demonstrate low-cost exploration of the lunar surface.
- 6U CubeSat to be put onto a course to the moon. The probe performs a semi-hard landing at a velocity of about 30 m/s.

OMOTENASHI [JAXA]

OMOTENASHI [JAXA]

OMOTENASHI [JAXA]

# Omotenashi MiPS

- (2) Identical RCS Assemblies (left & right):
  - Self-Contained Delta-V / RCS Systems
- (4) 25mN Cold Gas Thrusters in Each:
  - (2) Axial, Pitch / Yaw
  - (2) Roll Control
- All-Welded Aluminum Alloy Construction
- Normally-Closed Frictionless Valves
- Built-In, Shielded Control Electronics
- 9V to 12.6V Unregulated Input Voltage
- RS422 Data Bus Interface
- Integral Pressure & Temperature Sensors
- Minimum Impulse Bit: <4.0mN-Sec
- Range Safety Features:
  - Green R236fa Propellant:
    - Benign Fire Extinguisher Material
    - Max Pressure <0.69MPa (<100 psi)
  - (3) Interrupts Against Propellant Leakage

# Green Monopropellant Micro Propulsion Systems

*ECAPS 1N ADN Thruster on PRISMA*

*ECAPS 100mN ADN Hot Fire Test*

# ArgoMoon Hybrid Micro Propulsion System

## ArgoMoon

- Lunar mission designed by the Italian company Argotec for the Italian Space Agency (ASI)
- Will demonstrate proximity operations with the Interim Cryogenic Propulsion Stage (ICPS)
- Record images of the ICPS for historical documentation
- Test optical communication capabilities between the CubeSat and Earth.

# ArgoMoon Hybrid Micro Propulsion System

Customer is Argotec in Italy

EM-1 CubeSat

Self-Contained Propulsion System:

(1) Axial 100mN LMP-103S Delta-V Thruster

(4) 25mN Cold Gas ACS Thrusters:

Double Canted 15° in Pairs

All-Welded Titanium Alloy Construction

Normally-Closed Frictionless Valves

Built-In, Shielded Controller

Sensor Suite

9V to 12.6V Input Voltage

RS422 Data Bus Interface

ACS Minimum Impulse Bit: <1.25mN-Sec

Green LMP-130S Monopropellant:

Flight Proven on PRISMA

Qualified for Skybox

UN / US 1.4S (Commercial Aircraft)

R134a Pressurant / ACS Propellant

(3) Interrupts Against LMP-103S Leakage

(3) Interrupts Against R-134a Leakage

# JPL/MSFC Lunar Flashlight Mission

## Mission Objectives:

- Map surficial lunar water ice in permanently-shadowed regions

## Measurements:

- Using the difference in reflected laser light ratios to indicate the presence and quantity of water ice
- Multiple passes over lunar south polar region with potential ice deposits.

## Key Technical Constraints:

- 30 month maximum mission duration
- Surface illumination strategies

# VACCO Lunar Flashlight Micro Propulsion System

## Self-Contained Delta-V Propulsion System:

- (4) 100mN ADN Thrusters

- Provides Pitch, Yaw, Roll and Delta-V

- All-Welded Titanium Alloy Construction

- Normally-Closed Frictionless Valves

- Built-In, Shielded Controller

- 5V & 28V Input Voltage

- 15 watts while firing

- RS422 Data Bus Interface

- Full Sensor Suite

- Minimum Impulse Bit: <5mN-Sec

## Range Safety Features:

- Green ADN Monopropellant:

  - Flight Proven on PRISMA

  - Qualified for Skybox

  - UN / US 1.4S (Commercial Aircraft)

- (3) Interrupts Against Leakage

- Benign GHe Pressurant

- Safe and Arm Circuit

# NASA MSFC ISAT Iodine Propulsion Flight Experiment

- ⊕ Valves proportionately control iodine vapor flow to anode and cathode.
- ⊕ VACCO supplied (2) development units hot fire tested at both GRC and MSFC.
- ⊕ VACCO currently under contract for (5) flight units (4 delivered to-date).

(2) VACCO Proportional Flow Control Valves

# 6U Xenon Propellant Management System (PMS)

The VACCO PMS is a Highly-Integrated Xenon Storage and Feed System.

3W RF Thruster and Cathode Mounts to the Front Face of the PMS.

All-Welded Titanium Assembly.

Fully Qualified Components.

Storage Capacity: 71 cm<sup>3</sup> @ 2,000 psi.

10 micron System Filter.

High Pressure Transducer.

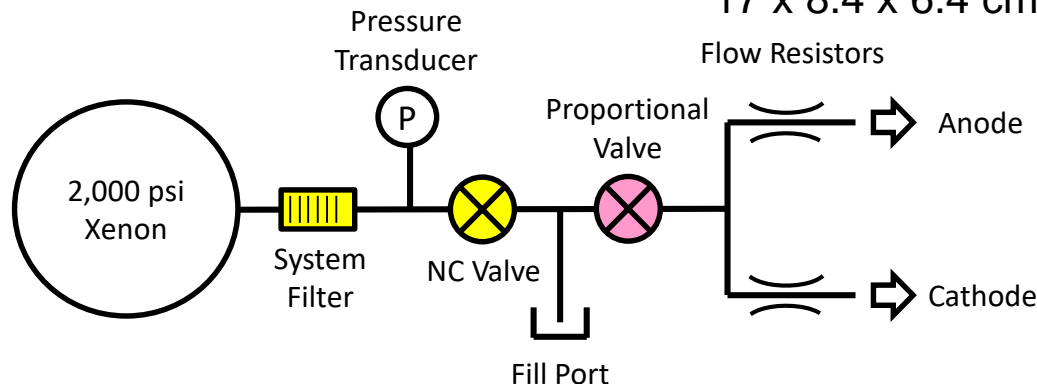

High Pressure Normally-Closed Valve.

Fill Port with Cap.

High Pressure Proportional Valve.

Flow Resistors for Fixed Flow Ratio.

17 x 8.4 x 6.4 cm envelope

# Summary

## ***Flight Proven on Tyvak NanoACE***

VACCO has a Variety of Micro Propulsion Solutions for ACS and Delta-V:

- ⊕ Tyvak NanoACE
- ⊕ NASA/Tyvak CPOD MiPS
- ⊕ JPL MarCO MiPS
- ⊕ JPL/NASA Lunar Flashlight EM-1 MiPS
- ⊕ JPL/NASA NEAScout EM-1 MiPS
- ⊕ SwRI CuSP EM-1 MiPS
- ⊕ JAXA Omotenashi EM-1 MiPS
- ⊕ Argotec ArgoMoon Hybrid EM-1 MiPS
- ⊕ Xenon & Iodine EP Feed Systems

Self-Contained Systems

Smart & Versatile

Various Propellants:

- ⊕ R236fa, R134a, Isobutane
- ⊕ LMP-103S, AF-M315E, Xenon & Iodine

Materials of Construction:

- ⊕ Titanium
- ⊕ Aluminum
- ⊕ Inconel
