**Developing CubeSat Model Based Systems Engineering
(MBSE) & Standards for Space (Ground & On Orbit)**

April 22, 2019

Software / Hardware Standards

319 Organizations; 60+ Universities

Addressing IT standards for more than two dozen verticals, including: C4I, Communications, Finance, Healthcare, E-Government, Space, Industrial Internet of Things, etc.

The mission of the Object Management Group (OMG) is to develop technology standards that provide real-world value for dozens of vertical industries. OMG is dedicated to bringing together its international membership of end-users, vendors, government agencies, universities and research institutions to develop and revise these standards as technologies change throughout the years.

Industrial Internet of Things
216 Organizations
(Industrial Internet of Things)

726 Organizations – 8 Paid Sponsors
Cost = Free on Registration
(Cybersecurity Through ID'g Common Weakness Enumerations (CWE))

Who is OMG?

1989

Founded

228

Specifications

319

**Member
Organizations
Worldwide**

11

**Specifications
Ratified as
ISO Standards**

- One of the largest and longest-standing not-for-profit, open-membership consortia developing and maintaining computer industry specifications.
- Continuously evolving to remain current while retaining a position of thought leadership.
- Long-term maintenance of proven standards

About OMG

OMG Vertical Markets

Founded 1989

International standards development organization

225+ specifications

325+ member organizations worldwide

11 specifications ratified as ISO standards

Standards are developed by OMG using a mature, worldwide, open development process. With more than 25 years of standards work, the OMG one-organization, one-vote policy ensures that every vendor and end-user, large and small, has an effective voice in the process.

Open Standards & Modeling Provide Savings & Focus

Targeting open standards **lowers Life-Cycle costs, Reduces Risk & Increases Resiliency and Returns on Investment (ROI)** through:

- **Increased Quality** (Specification, Designs and Implementation)
- **Vendor Neutrality** Specifications & Increased Competition
- **Increased Flexibility, Adaptability and Agility**
- **Higher Levels of Innovation**
- **Increased Levels of Interoperability**
- **More Efficient Use of Existing Resources**
- **Access to a larger and better trained labor pool**
- **OMG Standards & Models are taught** in Comp Science & Cyber Security programs (community colleges as well as 4-year schools).
- **Reduces risk as well as cost** and **improves** overall resultant **product(s) by modeling behaviors** of systems

Open Standards enable users to focus on unique business/operational needs rather than common technical challenge(s)

Open Standards & Modeling Provide Savings & Focus

What's the Value?

Workforce flexibility	Interoperability	Process optimisation
<p>Standard, best practice methods, inputs, and outputs</p> <p>↓</p> <p>Flexible distribution of tasks around workforce</p>	<p>Standard interfaces</p> <p>↓</p> <p>Flexible distribution of processes and information</p> <p>+</p> <p>Commodity services</p>	<p>Best practice, repeatable processes</p> <p>↓</p> <p>Optimisation (time, quality, cost) of flow of components and tooling</p>
<p>DoDAF (aka Unified Architecture Framework (UAF)) in EA practice</p>	<p>CORBA, DDS, SCA, etc.</p>	<p>Modelling in service delivery (BPMN, UML, SysML) Ground Stations (XTCE, XUSP, GEMS, SOLM, C2MS)</p>

Open Standards & Modeling Provide Savings & Focus

Ways to Value from Standards & Standards Bodies

Standards Body offers:	Business gets value by:	Example:	Actions to take:
Access to latest industry standards, techniques, etc.	Using IP from standards bodies internally, and visibility of new industry trends	UAF used in internal EA framework and EA skills development.	<ul style="list-style-type: none"> Active engagement by internal process owners Promotion to internal technical communities
Publication and presentation platforms	Demonstrating capability and influencing the marketplace	Presentations delivered to conferences Own IP becomes industry best practice	<ul style="list-style-type: none"> Present at conferences and other events Propose IP to standards, white papers etc.
Networking opportunities	Visibility and knowledge of customers and partners	Working group membership maintains a relationship with important customer or partner	<ul style="list-style-type: none"> Meet stakeholders Ensure company engagement is visible

Industry Research Findings:

ISO study [1]: Profit contribution from standards ranges from 0.15% to 5%
BSI study [2]: increase in turnover from using standards of between 1.7% and 5.3%

1. ISO, 2014, "Economic benefits of standards", http://www.iso.org/iso/ebs_case_studies_factsheets.pdf
2. British Standards Institution, June 2015, "Economic benefits of standards – research reports", <http://www.bsigroup.com/en-GB/standards/benefits-of-using-standards/research-reports/>

Open Standards & Modeling Provide Savings & Focus

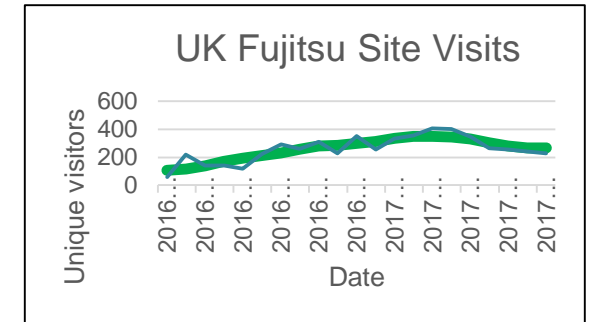

Measuring Value

1 – Practical Things Can be Counted

Business gets value by:	What to count:
1. Using IP	<ul style="list-style-type: none"> Number of internal methods, guidelines, templates etc. Number of projects using the standards or methods Number of people trained / certified
2. Demonstrating business capability	<ul style="list-style-type: none"> Number of presentations Number of IP submissions (white papers etc.)
3. Networking with customers and partners	<ul style="list-style-type: none"> Number of stakeholders met Number of opportunities / suspects

Cost model Item	Purpose	Forecast GBP	Forecast JPY
Staff 1	Headcount cost	£ 243,529	¥ 31,658,770
Staff 2	Headcount cost	£ 102,126	¥ 13,276,338
Develop BP Collateral	SME Project costs for funding r&d development	£ 32,386	¥ 4,210,193
Support rollout BP	Project costs for funding rollout & promotion	£ 6,000	¥ 780,000
BP promotion	Travel and accommodation costs for promotion	£ 12,140	¥ 1,578,210
SME meetings - travel and accommodation	SME Travel and accommodation costs for r&d	£ 8,171	¥ 1,062,221
Miscellaneous expenses	Any other expenses	£ 57,367	¥ 7,457,726
Sub total	Sub total	£ 461,719	¥ 60,023,458
Contingency	Contingency	£ 46,627	¥ 6,061,480
TOTAL	Total	£ 508,346	¥ 66,084,939

2 – Estimate the ROI Case Study

Benefits model	
Site visits	3570
Use rate	50%
Savings per use	7.5h
Hourly rate	7000 Yen/hr
Benefits (Yen)	93.7 M Yen
Benefits (GBP)	0.72 M GBP

What's the ROI:

Benefits	0.72 GBP (0.93 US \$)
Cost	0.51 GBP (0.66 US \$)
ROI	41%

CubeSats Are Too Small for Standards

- Three F-18 Fighters drop over 100 Drones
- Drones Inter-react with Each other on the Fly & Communicate with
 - Each Other,
 - Ground Assets, and
 - Sea Assets
 - Command Assets
- Man “On the Loop” Versus “In the Loop”
- Demonstrates “Actionable Intelligence” versus “Artificial Intelligence”

Used 18 OMG Standards to Perform Testing Mission

<https://youtu.be/NSxFDjPAV7M>

What Is It ? And What Does It Do?

**Specifically
Chartered
To Foster the
Development of
Space-Related
Standards**

The OMG Space Domain Task Force (SDTF)

- Space professionals committed to greater interoperability, reduction in costs, schedule, and risk for space applications through increased standardization

- The SDTF works cooperatively with the CCSDS to ensure consistent space standards are developed.

- OMG's Space DTF is Fast But Not To Fast : 9 – 24 months to deliver a standard
- Final result will be specifications and interfaces NOT products
 - Implementations of OMG specifications by users
 - Those implementing specifications need not be OMG members
 - Specifications are *freely* available
- Collective wisdom - broad range of input
- Standards/Specifications based upon Gov't & Industry consensus

Specifications Freely Available

OMG Space Domain Task Force (DTF) Delivered Specifications

- [XTCE](#) (XML Telemetry and Command Exchange) (1.1)
- [GEMS](#) (Ground Equipment Monitoring Service)
- [SOLM](#) (Spacecraft Operations Language Metamodel)

Work-In-Process

- [XTCE](#) 1.2 Revision Task Force deadline March 2018 (Finalization by June 2019)
- [C2MS](#) (Cmd & Control Mission Services) in Finalization Task Force expected to be complete June 2019

Space & Other Relevant Specifications Being Initiated

- CubeSat Systems Reference Model (CSRM) (INCOSE & OMG Initiative)

Future Work being Considered

- **Ontology**, archiving, display, cyber
- Ground Station **Ontology** (Spacecraft Operations Language Metamodel),
 - <http://www.omg.org/hot-topics/spacecraft-ground-systems-rfi.htm>
- Data Archiving,
- Display Page Exchange
- Cyber Security

Other OMG Relevant Specifications to Consider

- Data Delivery Services (DDS)
- Information Exchange Framework (IEF)
- Cyber Security for Front Line Systems
- [Secure Networking Communications \(SNC\) – Middleware and Related Services \(MARS\) Working Group](#)
 - [Space Telecommunications Radio Services \(STRS\)](#) and
 - [Hybrid Adaptive Network \(HANw\)](#)
- Alarms & Event Notification and Scheduling
- Telescope Reference Model

XTCE & XUSP Status

XTCE

- XTCE 1.2 RTF has dispositioned 244 of the issues submitted.
- ALL of the remaining issues closed in ballot on Feb 12th and resolved.
- The resulting revised schema will be largely forward compatible with existing XTCE 1.1 documents and members of the RTF are developing tools to transform forward incompatibilities, e.g. element name changes
- RTF report submitted and OMG Architecture Board Approved Sep 2018
- XTCE 1.2 Specification Published Oct 2018
- XTCE 1.1 is being used by military, space agency, and commercial space programs as an open exchange format and upgrading to 1.2.

XUSP - a tailored version of XTCE to support CCSDS formats and typical field constraints

- XUSP RTF is awaiting publication of XTCE 1.2, since it is a defined subset profile of the XTCE specification. XUSP is a tailored version of XTCE to support CCSDS formats and typical field
- No pending issues, but after publication of XTCE 1.2 an issue will be submitted to address compatibility.

Command & Control Message Specification (C2MS)

What is it?

- A set of standard message formats for the exchange of information for C2 functions
- About 30 messages covering areas like events, telemetry frames or parameters, directives, navigation, commanding, and more.
- Aligned with key interfaces normally found in today's commercial C2 system products

Where did it come from?

- NASA's Goddard Mission Services Evolution Center (GMSEC) Interface Specification document provided the primary source material
- NASA will retire its ISD when C2MS is published
- Note: ONLY the message formats are being standardized, not the API or components

What is the status?

- NASA has worked with the Space Domain Task Force on C2MS for the past year and submitted the required materials for consideration in mid-February 2018
- OMG Architecture Board Approved in Sep 2018 and in Finalization Task Force for Completion
- Is available for specification download by March 2019 to OMG Members and will be finalized in June 2019

Fits on a Laptop

OMG Space DTF (SDTF) Future Backlog

- Telemetry Display Page Definition Exchange
 - No draft RFP exists, yet, just conceptual. Some interest, but this is a difficult problem.
- Ground Data Delivery Interface
 - No draft RFP exists, yet, but has been discussed as a companion spec to GEMS for delivering binary mission and housekeeping data within a ground station.
- Alert Management System
 - US Air Force EGS adopted the OMG C4I Alert Management Service (ALMAS) specification rather than request a specific space domain specification
- Goddard Core Flight Services (Cfs)
 - Goddard has several technologies with more general space industry applicability that are waiting for the results of the C2MS RFC from NASA for a possible path forward.
- **Spacecraft Operations Ontology**
 - In works, tough to do, about 10 ontology's being worked on now and being expanded (180 requested)

CubeSat Systems Reference Model (CSRSM)

The International Council of Systems Engineers (INCOSE)

- Utilized OMG's Systems Modeling Language to Develop
- A CubeSat Systems Reference Model that provides information
 - For universities, students, businesses and developers of CubeSats
 - Provides Behavior modeling between subsystems
 - Validation & Verification (V&V) processes
 - Coordination points for launch

Model Based Systems Engineering (MBSE) [1]

Formalized application of modeling to support requirements, design, analysis, validation, and verification

Systems Modeling Language™ (SysML™) [2]

A graphical modeling language for modeling complex systems including hardware, software, information, personnel, procedures, facilities and Coordination's

Systems Engineering
Methodology

System Modeling
Tools

Interfaces with
Other Models

Purpose: To Provides a CubeSat Systems Reference Model that CubeSat Teams can use as a starting point for their mission-specific CubeSat & Develop into a OMG Standard

CubeSat Systems Reference Model (CSRM) (Continued)

- **SysML Model Elements that can be populated to specify the Logical Architecture of a CubeSat Enterprise System (Space & Ground)**
- **Logical Architecture decomposes the system into components that interact to satisfy system requirements**
- **The components are abstractions of physical Components that perform system functionality but without imposing implementation constraints**
- **The CSRM is systems engineering agnostic**
- **A mission specific team can import the CSRM into their graphical modeling tool to initiate their process for architecting, designing and developing their mission specific CubeSat Model (MCM)**
- **The MCM will be a repository for the systems engineering artifacts created by the mission specific Team**

CISQ/OMG Standards Process & Published Standards

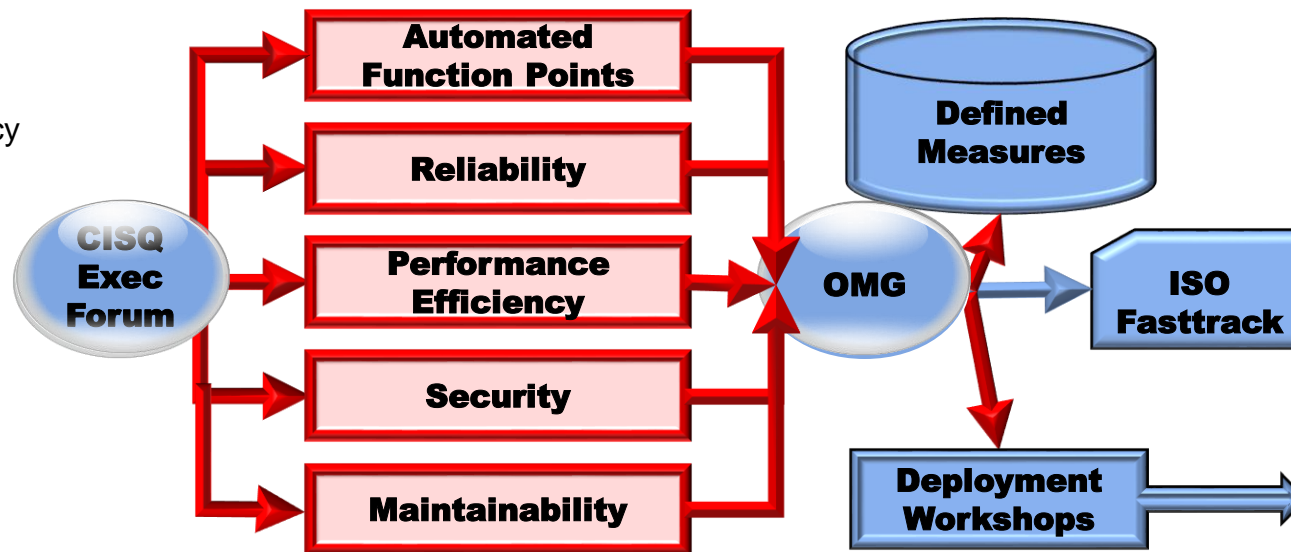

Software Sizing - Published

- Automated Function Points
- Automated Enhancement Points

Software Structural Quality - Published

- Security
- Reliability
- Performance Efficiency
- Maintainability

Consortium for IT Software Quality (CISQ) Work Groups

Technical Debt – Published

- A new OMG® standard for measuring the future cost of defects remaining in system source code at release
- The cost to fix structural quality problems constitutes the principal of the debt, while the inefficiencies they cause until fixed, such as greater maintenance effort or excessive computing resources, represent compounding interest on the debt

For future development...

- Extending the software quality measures to embedded and real-time systems, which is critically important for the Internet of Things (IoT)
- A measure of quality-adjusted productivity

The 22 CWEs in the Security Measure

- **CWE-22** Path Traversal Improper Input Neutralization
- **CWE-78** OS Command Injection Improper Input Neutralization
- **CWE-79** Cross-site Scripting Improper Input Neutralization
- **CWE-89** SQL Injection Improper Input Neutralization
- **CWE-120** Buffer Copy without Checking Size of Input
- **CWE-129** Array Index Improper Input Neutralization
- **CWE-134** Format String Improper Input Neutralization
- **CWE-252** Unchecked Return Parameter of Control Element Accessing Resource
- **CWE-327** Broken or Risky Cryptographic Algorithm Usage
- **CWE-396** Declaration of Catch for Generic Exception
- **CWE-397** Declaration of Throws for Generic Exception
- **CWE-434** File Upload Improper Input Neutralization
- **CWE-456** Storable and Member Data Element Missing Initialization
- **CWE-606** Unchecked Input for Loop Condition
- **CWE-667** Shared Resource Improper Locking
- **CWE-672** Expired or Released Resource Usage
- **CWE-681** Numeric Types Incorrect Conversion
- **CWE-706** Name or Reference Resolution Improper Input Neutralization
- **CWE-772** Missing Release of Resource after Effective Lifetime
- **CWE-789** Uncontrolled Memory Allocation
- **CWE-798** Hard-Coded Credentials Usage for Remote Authentication
- **CWE-835** Loop with Unreachable Exit Condition ('Infinite Loop')
