U.S. AIR FORCE

- South Atlantic Anomaly (SAA)
 - Misalignment of Earth's dipole magnetic field & rotation axis
 - Results in weaker magnetic field in south
- Allows high energy particles access to LEO

Energetic electrons primary cause of spacecraft charging ² Charging caused more than half (161/198) of documented environmental anomalies¹

Lessons Learned and Way Forward

- Sink Navy
 - Integration Challenges: It's crucial to have a clear understanding and plan before initiating integration efforts. Attempting to figure things out after starting can significantly complicate the process.
 - Regular Communication: Keeping open lines of communication is key to navigating and resolving issues effectively.
 - Documentation: Joint ICD created with Naval Academy.

Planned Calibration Testing

U.S. AIR FORCE

- Looking to test complete system at AFRL/AFIT with realistic radiation environment
 - Data recorded from all outputs
 - Produce calibration between dosimeter counts and rads for on-orbit use
- Test EDU unit
 - Identical to Flight unit
